Entry

Signal for entry its divergence on Stochastic Indicator MTF (you can see blue (long) and red arrows (short)

Enter its on next open bar

Enter its with 3 lots or 3mini lots or 3 micro lots

Risk Management

Setup for stop loss on long position is 10 pips below low signal Bar (signal bar its when you see arrows)

Setup for stop loss on Short position is 10 pips above High signal Bar (signal bar its when you see arrows)

After closing 1st part of position we move SL to Break even BE

All open position we are closing at 20.00 (8.00 PM)GMT+1

Profit Management

First target is 10 pips above open in Long Position or 10 pips below open in Short position where we close 1/3 our position and SL move to BE

Second target is 15 pips above open in Long Position or 10 below open in Short position where we close 2/3 our position and SL leave on BE

Third target we have open until we don't see signal against our position, close 3/3 our position on open next bar after Signal Bar against our position. (If we are long and we see signal to short we close position on open next bar)

Adding to position to our trend we can add but keep same rules but be carefull with account with FIFO rules .
