Total	60	100,00	37	100,00	81,82	18,18	737,5	-227,0	27,31	-37,83	100,00	100	100	81,82	27,27

N(all) – total number of setups of certain type;
%All – what is the % of this type of setups among all setups;
N(good) – number of setups of certain type with good SL, R:R and no serious "cons" of technical character;
%good – what is the % of "good" setups of this type among all "good" setups;
Pf% - percent of profits among "good" trades of certain setup;
Ls% - percent of losses among "good" trades of certain setup;
AbsPf – absolute profit (sum of all profit trades) for certain setup;
AbsLs – absolute loss (sum of all loss trades) for certain setup;
AvPfTrade – average profit (pips/1lot);
AvLsTrade – average loss (pips/1lot);
%TotalBalance – what % of total balance belongs to trades of certain setup;
%TotalPfs – what % of total profits number belongs to specific setup;
%TotalLss - what % of total losses number belongs to specific setup;
TP1isHit% - in what % of all "good" setups of certain type TP1 is reached;
TP2isHit% - in what % of all "good" setups of certain type TP2 is reached.

Just some conclusions. So, in the period of 17/03/08 – 13/05/08 ...
- TCs make 43,24% of all "good" setups and bring 51,42% of total result;
- Percent of profitable trades, % of positions reaching TP1 and TP2 is the highest among TCs (LH, ZB, BOZ and RB are not considered due to their small quantity);
- ATs and HLs make about 38% of all "good" setups but only about 4% of total balance;
- Just 4 BOZ and ZB trades (about 11%) make about 42% of total balance (several "big" trades).
