# QUICKDEAL

WADMAX TECHNOLOGIES

QuickDeal is an add-on to the MetaTrader 4 trading platform for One-Click Trading. It also has some additional useful features such as Net Volume, P/L and Break-Even Price information as well as Close All button.

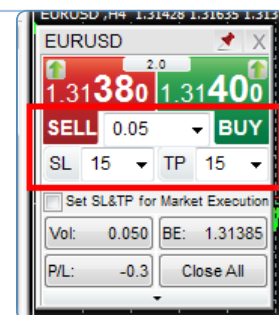

Features

Order opening with one mouse click

There are two main buttons - Buy (green) and Sell (red) - with current trading instrument prices. To open an order you need to click on one of them with the left mouse button.

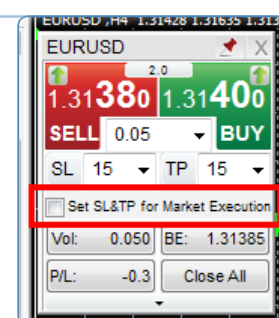

Volume, Stop Loss and Take Profit settings

You can set the deal volume by choosing it from a list of preset values or by entering the precise amount manually. QuickDeal also allows you to set your Stop Loss and Take Profit levels. You can choose the SL and TP levels from a drop-down list or by entering them manually.

SL and TP on Market Execution

On market execution, the Stop Loss and Take Profit levels cannot be set at the moment of order opening. You need to modify an order after it is opened to set SL and TP. QuickDeal can set Stop Loss and Take Profit for open orders on market execution. To enable this feature you need to check the "Set SL&TP for Market Execution" box.
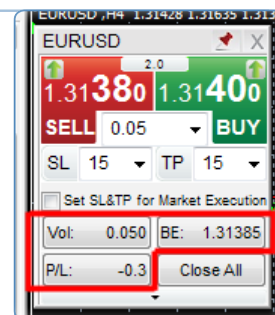

Net Volume, P/L and Break-Even Price

QuickDeal provides you with useful informa-
tion that is not shown in MetaTrader 4. You
may be interested to find out your current
trading instrument's open positions net
volume, P/L or break-even price. All this
data is available in QuickDeal.
Net Volume - the net volume of all current
trading instrument opened positions = All
Buy Positions Volume - All Sell Positions
Volume
P/L - Profit/Loss for your current trading
instrument
Break-even price - the price at which P/L
for the current trading instrument equals
zero.

Close All button

Using the Close All button you
can close all current instru-
ment positions or ALL positions
on this trading account. You will
need to confirm your decision to
close all your deals before you
actually do so in order to avoid
accidental actions.

Pin-Unpin button

The QuickDeal window is located at a
specific place on the chart by de-
fault. You can move it anywhere in-
side the MetaTrader 4 window by
pressing the Pin-Unpin button. You
can also return it to its original
location on the chart by pressing the
button again.

Current Spread

The standard MetaTrader 4 does not show
the spread between the bid and the of-
fer prices. Thanks to the QuickDeal
tool, this information is now available
in Trader's Way MT4.

How to Get Started

1 | Login to your MetaTrader 4 account
