

Obtaining quotations beside NeuroShell Of day Of trader Of professional
on DDE from MetaTrader4
before the operating system MS Windows XP Of professional of ver.2002 of sp2

In connection with the fact that program NST is calculated at the point of the American users, it valuably works only with established English (United Of states) regional tuning, let us establish them, for this put adjusting disk OS beside the disk drive.

Visit beside the control panel and open dialog “Regional and Language Of options”: the menu Of start>Control Of panel> Of regional and Language Of options.

You will establish as beyond the picture, English (United Of states). Dialog box with the demand about copying of the new files of the tuning, where you should answer Yes and put adjusting CD of operating system, after which possibly will appear.

Then press beyond [knopochku] Of customize...

Before the appeared dialog box on the laying Of numbers:

before the fields “Of decimal of symbol” and “Digit of grouping of symbol” it is necessary to place points “.”

Then we pass down the laying TIME:

On this laying you will be convinced besides the fact that in you the size of time it is established as on this picture.

Then press ok before this window and previous.

If in you appeared the demand of adjusting the compact of the disk, which you certainly put.

And copying new files.

That you one should [perezagruzitsya].

It is now necessary to prepare program NST for obtaining the data before the size DDE

For this we should create before the catalog of the program:

“NeuroShell Of trader of 4 directory \ Of servers \ Of dynamic Of data Of exchange Of server”
text file with this content:

Each line before this file consists besides <[IdentifikatorInstrumenta], [NazvanieInstrumenta]>

Where [IdentifikatorInstrumenta] this name of tool in [MT]4, and [NazvanieInstrumenta] its this idea in NST (better to leave identical.)

Preserved file must be as Forex.lst - which indicates that tools will be before the category Of forex.

Now it is possible to dispose DDE Of server of program NST for obtaining the quotations from MT4

For this let us open the program “Of dynamic Of data Of exchange Of server.exe”

Located before the catalog “NeuroShell Of trader of 4 directory \ Servers”

Before the appeared window “Of dynamic Of data Of exchange Of server” press key “Setup”

Will appear window “DDE Of archiver Of setup” here before the list DDE Of server > you select “New Of server”

You call its “Metatrader4”

You further harvest the button "Of set DDE Of link"
And you tune the parameters DDE of server as on the picture:

Then with the aid of the button "Of add Of symbol" add before the window "Dynamic Of data Of exchange Of server" tools which we they transferred before the file "Of forex.lst"

Now shut this window and program NST.

You will neglect MT4

You will include there export DDE roll up [MT]4.

You will neglect program NST, together with the program now must be neglected "Dynamic Of data Of exchange Of server", also, through several seconds, before its window must begin to renew the values Of lastDate Of lastTime, before them must it will appear the date and the time of the last renovation of price as on the picture.

In any event, beside [programm]e NST before the menu Of tOOLS>DataSources... on the laying Of servers

It is necessary to establish all tuning as beyond the picture:

To [t].[e] to place the source of data OF DDE and the category Of forex

After which press [ok].

You [perezapustite] program.

You will be convinced besides the fact that given before the window "Of dynamic Of data Of exchange Of server" they renew.

Visit beside the program NST

Of the menu Of tools>DataSources> add with the aid of the button Of autoScan... files which it preserves adviser Currency Of loader of v2.0 (which at this moment must be connected down [MT]4 and incessantly renews to us files.)

Then it is necessary to change category down "Forex" t to the category beside which [vygruzhat] given adviser and DDE of server must be identical. You harvest ok

Now we have: before the category Of forex the adviser pumps to us history, for example on the tool EURJPY, and DDE of server he pumps ticks on EURJPY beside the category Of forex.

Opened tool to us must be from the category Of forex, history will be pumped by automatic weapon adviser it unloads one file for pumping of history with the name of <Symbol> based on [taymfreyma] Of [m]30 i.e. history it [podgruzhaetsya] 30[m]. by bars.

Is discovered the graph:

We go the menu Of file>New Of chart>No Of template>

Then we select Intraday Of m30:

We harvest NEXT we select the category Of forex, also, before it tool (for example EURJPY)

Must be opened graph based on 30[M] by history, 0 bar of which will be red.

It is possible to additionally open any of the tools of [foreks] being present before the category, and if adviser then unloads on them history, graphs will be opened analogously,

Unfortunately DDE not [podgruzhaet] volumes. Adviser [podgruzhaet].
