Steve Hopwood's BS Asain session breakout multi-pair

The next paragraph is copied from the BK website:

The Set Up Rules:
The strategy based breakout demarcates the Asian session period as
5PM EST (22:00GMT) to 2AM EST (7:00GMT) measuring the highs and
lows of that range. Although the Asian session continues for a few more
hours beyond that time, Frankfurt and London traders arrive at their desks
at 7:00 GMT and will often begin to move markets with force even before
the region's equity markets open up for business. That's why 7:00 GMT
serves as the starting point for the setup.
The setup is most effective on the four major currency pairs
- EUR/USD
- GBP/USD
- USD/JPY
- AUD/USD

This robot trades the system described above. I lose the will to live when I contemplate
describing *again* what the inputs do. Experiment and find out.
