Dear Bedayan,

If the original coder can send me all details and the mq4 file, so all will be fine. Feel free to ask him to do so.

If nobody can provide the mq4, nothing can be done.

Best regards,

FerruFx - Ervent

Hi,

If you check following reply from post 54 from the thread <http://www.forexfactory.com/showthread.php?t=351370> the original coder who developed this searching for good coder to modify the code. Original coder is not a professional coder .If you make the changes it will be highly appreciated. That is why I searched good coder to make the required modification which I mentioned below mail.

'I have no idea why that happens and therefore I cannot solve it yet.

The help of a good coder would be appreciated but although I asked for help from the beginning of this project, nobody was interested to help.

So we have to live with that strange behavior until one day I will find

The cause.'

Based on the following logic which I mentioned below is it not possible to develop new dashboard in .mq4 version? The logic and list of check which I mentioned below based on that you can develop the new dashboard for .mq4 version. If its not please let me know then we can go ahead with the changes in .ex4 file?

Regards,

Bedayan.

Subject: Re: Ervent.net website request: Coding Services

Sorry but if the original coder didn't provide the mq4, I can't work on this unless coding the whole indicator from scratch.

It is possible to decompile the ex4 file and work on it but it would be disrespectful for the original coder.

Hi,

We have only .ex4 file version for this indicator and we are using the same. Not having any .mq4 file version for this indicator. Is it possible to convert it to .mq4 file and make the following changes and fix the bugs.

Regards,
Bedayan.

Dear Bedayan,

You forgot to send as requested the mq4 files of the indicators. You sent only the ex4 files.

Thank you.

Best regards,

Hi,

In the attached file you will get the indicator and the template. Please see below rule that needs to be checked and incorporated. Also addition to that below I have mentioned some of bugs which needs to be rectified. Let me know if you require further clarification regarding this.

Following <http://www.forexfactory.com/showthread.php?t=351370> link you will get dash board screenshot. **Please note indicator folder whatever indicator are there both of them needs to be inserted in the MT4 expert indicator folder to make this indicator work.**

First it should check price action trading below or above 50SMA or not. This moving average value is modifiable. Based on moving average value signal should be given. User should be able to input the moving average value based on his preference.

If price action above 50SMA or any other sma value you mentioned then it should give buy signal based on following any of the three different criteria satisfied. This different signal is given by three different type or arrows in the dashboard.

1. it will give bullish engulfing signal. This bullish signal change has to be done second bar body should engulf the previous bar body and second bar should close within the top 25% of the bar range.
2. Inside bar signal.
3. Alternate signal. Please see attachment how the alternate signal is picked up. Also if alternate signal and bullish engulfing signal or inside bar both happens together then dash board should give alternate signal priority over engulfing signal or alternate signal. Should only show alternate signal.

If price action below 50SMA or any other SMA value you mentioned then.

1. it will give bearish engulfing signal. This bearish signal change has to be done second bar body should engulf the previous bar body and second bar should close within the bottom 25% of the bar range.
2. Inside bar signal.
3. Alternate signal. Please see attachment. Also if alternate signal and bearish engulfing signal or inside bar both happens together then dash board should give alternate signal priority over engulfing signal or alternate signal. Should only show alternate signal.

Bugsh Needs to be fixed:

- 1.** Alert popup box giving signal with blank text.
2. Signal are given after each New H4 or H1 or D1 candle start. But its not updating in dashboard correct. For updating it we need to change the time frame for example may be H1 to M30.

Regards,
Bedayan Chakrabarty.

Dear Bedayan,

In order to study, I will need the mq4 file of the indicators and all details/rules to see what is going wrong.

Thank you for your confidence.

Best regards,

Bedayan Chakrabarty's message:

Hi FerruFx,

I have seen your details in the forex factory. I require a help in developing a indicator.Details for this you will get in following link. Indicator 60mm dashboard V6.zip has been developed by FXtr51 but its having some bug.He is a new coder not able to rectify the problem.Require your expert help.Details you will get in following link

<http://www.forexfactory.com/showthread.php?t=351370>

Indicator having following problem.

1. Not updating the signal automatically.Need to change the time frame for updating the signal.
2. Some signal showing blank signal.

Hope we will get some help from you.

Regards,

Bedayan.
