All trades will be shorts
In this example

2 pip k is only example.
Could be less or more
Need indicator to optimize

↑ expiration

-H

+H

Recurrent safe trade zone
Soon as price enters go short
for 1-10 pips ect..

2 pip constant K or "region"

Possible transient price ↓

Up trend defined by your personal method

Previous bar high breakout creates a possible transient price at 1 pip above high
Soon as that pip is hit a 2 pip yellow box goes above. Wait for the break of this box and short
For an almost sure 1-10 pips . If box below green H expires close trade. Given the correct H
Probability is on your side for "almost sure" wins
