

CHAOS DIMI strategy

Hey guys,

Thanks for the welcome. All I'm doing is **using both the Haos Visual Averages and Chaos Visual Averages 1.2 combined into one window.**

There's no real need for this but it's just a visual preference as both indicators are basically the same.

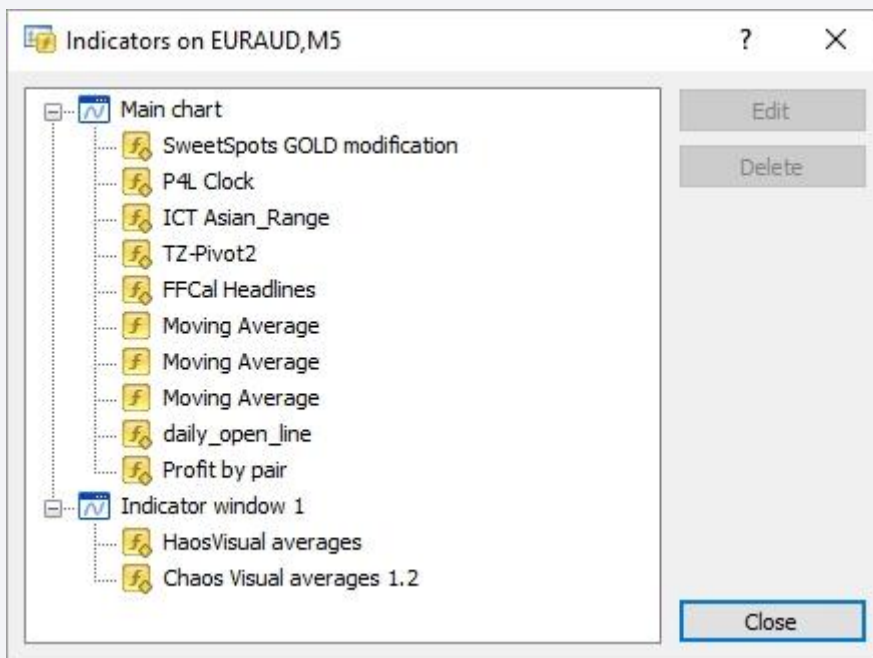

I'm using the standard settings on both (see below) and so far I've been scalping the 5M charts on 6 x volatile currency pairs during London and New York sesh for 10-20 pips then rinse and repeat.

I also use a 3 x 34 EMA lines at High Low and Close just gauge how far price has ventured and standard pivots just to show me where price might bounce off.

But it doesn't really matter.

See below for all indicators and a template if you want to play around with it.

About Common **Inputs** Colors Levels Visualization

| Variable | Value |
|---|----------------|
|  First wpr average smoothing period | 8 |
|  First wpr average smoothing method | Super smoother |
|  First wpr period | 14 |
|  First wpr up level | 30.0 |
|  First wpr down level | -30.0 |
|  Second wpr average smoothing period | 8 |
|  Second wpr average smoothing method | Super smoother |
|  Second wpr period | 96 |
|  Second wpr up level | 40.0 |
|  Second wpr down level | -40.0 |
|  Should the averages be double smoothed? | false |

My favorite is still the Averages mtf 8.5 + Chaos. Absolute rainmaker on trend reversals. 1h & 4H crosses over the daily = \$\$\$

AUDCAD reversal a few weeks back. Typically you'll see a divergence on the 4h Chaos leading up to the reversal.
