

Version 5 is a total upgrade from the previous versions. It is kind of a combo of the best of the previous versions.

We use the BB of version 1 but in a totally different way. We use the 6ths indicator, along with the MPTM of version 4. This is sections 1-3. Section 4 will deal with trading in a trend and section 5 will be recovery trading.

Inside the folder you should find the following 7 folders:

- 1) READ FIRST, READ SECOND, READ THIRD. Obviously reading them in order will be the least confusing. If I make any changes in a folder you will see them renamed to 5.1 or 5.2. This way you will know if you have the most updated version of that section. For example the 2.4.2 section is still the 4.0 version. I haven't upgraded that section yet.
- 2) INSTRUCTIONS FOR LOADING
- 3) NANNINGBOB 4H TRADING SYSTEM VERSION 5.0.
- 4) PICTURE OF THE BLANK SCREEN SO YOU CAN SEE WHAT THEY ARE SUPPOSE TO LOOK LIKE
- 5) FOLDERS
  - i) TEMPLATES FOLDER 2 templates. The MPTM is blank and you will have to put which version of MPTM you want and then save the template.
  - ii) EA FOLDER (EAs should work for both 4D and 5D versions since they are based on simple crosses that don't change when you go from one kind of broker to another. They also should work with ECNs because there are not SL or TP in the EAs. You can add these on.
  - iii) INDICATORS FOLDER
  - iv) SCRIPTS FOLDER
  - v) MPTM folder There is only one template, you can make your own for buy and sell EAs.

If you have some of the other editions I have tried my best to eliminate the differences in screens and EAs. I took the MT4 MACD and changed it for my system and called the NB MACD. It now shows the same line as the TRUE MACD but this one is a smaller code and simpler. The 4D is the same as I use on my live accounts.

**All EAs are set at .01. If you want to trade bigger lots you will need to change the EA and then save the template to your changes. If your broker only uses .10 lots you will need to change the EA.**
