## MT4 Plug Ins

Panda provides a very comprehensive suite of plug ins for MT4 brokers looking to enhance their capabilities:

### **ANTI SCALPER**

Brokers that are involved in market making activities often possess a scalping policy. The Anti Scalper plug-in system enables brokers to automatically imply anti-scalping methodologies.

### **VIRTUAL DEALER**

Introduction:

Virtual Dealer Plug-in system emulates dealer's actions specified for symbol groups with manual execution. The plug-in system implements the following features:

- Clients' request confirmation based on regulated execution delay up to 10 seconds with limit, stop loss and freeze levels recheck.
- Processing of pending orders activations, stops triggering, and stop outs.
- Request confirmation on price stream (instant execution) with adjustable permitted slippage.
- Limit, stop and freeze levels automated update according to the predetermined news update schedule.
- Resetting, modifying and deleting of pending orders during news inform.
- Working in parallel mode, works with real dealers environment. Though that mode, the processed requests do not exceed the predetermined level.

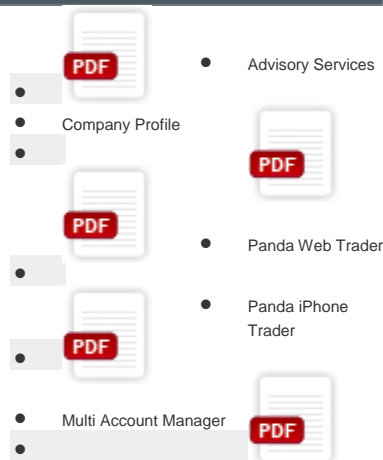

### **QUOTE CHECKER**

Broker can monitor real time data feeds, facilitating his clients trading operations with inundated prices.

## Request Demo Trial ▶

Technical Information:

- In case of symbol rating inflow stop, MT4 securities trading with that symbol is disabled
- In trade attempt when the plug-in system is disabled, "Trading Disabled" message will be received. The Plug-in system notifies its user with the problem either by mail or sms.

#### ***IB PROFIT / RISK SHARING***

Brokers can attract IB partners by offering them different levels of partnership. Automated risk sharing involvement is given to IB partners' clients, based on the partnership level.

Technical Information:

- The system automatically calculates the risk percentage taken by IB group
- Real time precise accounting measures
- Customized parameters

#### ***TRADER ABUSE ALARM***

Fraud and abuse detection is limited by the broker's operational risk.

Technical Information:

- The system alerts the trader in case of making more than X successful trading operations in less than specified time limit.
- The system alerts the trader in case of crossing the X profit percentage or value in less than specified time limit.
- The plug-in system allows its users flexibly change its constraints, in order to answer your specific needs.

#### ***EVENT MONITOR***

Automated trading account event email or sms alert for stop loss reach, profit take position, margin call and numerous additional messages, can be sent to brokers' clients.

Technical Information:

- Event monitor notifies the subscribed customers with specified event.
- Important event can be send to the Chief Dealer or to the Sales manager in charge on the specific group of clients
- Event can be changed according to flexible parameters

#### ***NEWS CONNECTOR***

Brokers can automatically supply their customers' terminals with real time data feeds. News connector is designed for brokers that operate in certain geographical or specialized markets

Technical Information:

- Can support multi data feeds and including digital media
- Advanced log system reports any type of connection problems, and informs the client when the connection become available
- The plug-in system allows the broker fully customize its report operations

#### ***CUSTOM PLUGIN***

Each brokerage has its own reporting and settlement needs, plug-in system brings in new technology implementation and custom development features, supplied by request, to manage day-to-day market flows.
