

Concept of Threes explained.

First, the blue lines are the high and the low of the previous bar

Not for clarification;

The term HH (higher high) or LL (lower low) typically refers to a swing high or low as in the "M" or "W" or 1,2,3 type formations

Concept of Threes explained.

The 3rd line is the opening price of the current bar.

The line is either red or gold.

Red if the price opened below the open of the previous bar (as in this example)
or Gold if the price opened above the open of the previous bar

Concept of Threes explained.

Since the current bar opened Red, we would be looking for a Short entry below the lower blue line. We would not be looking for a Long entry.

This trade would have been triggered.

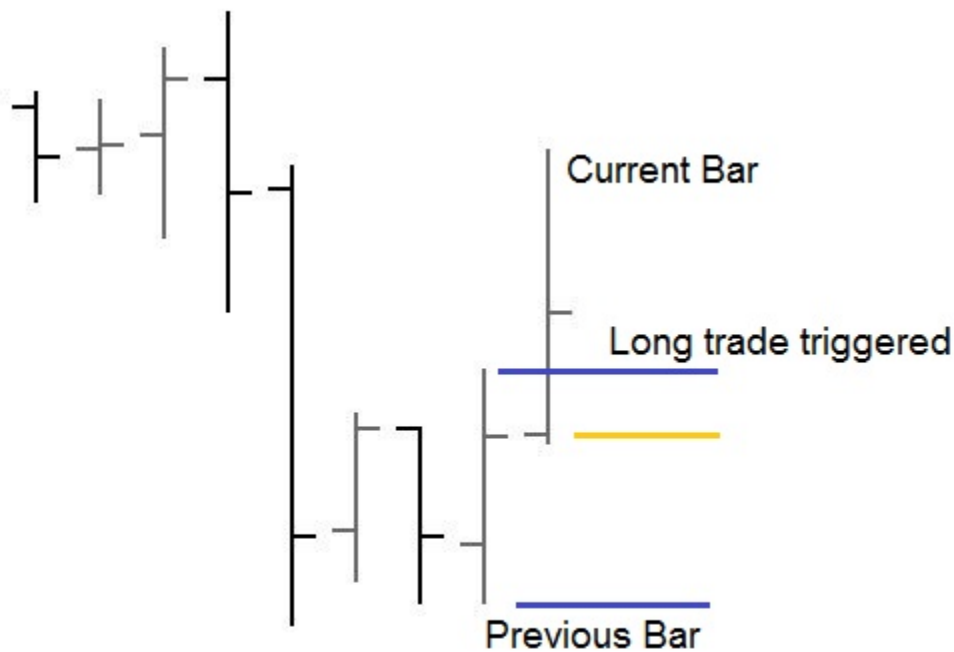

On this bar we were looking for a Short trade. No trade was triggered.

The break above was not a Long trigger.

It does give us warning that downside movement may be coming to an end.

Here the bar opened above the previous bars open so we would be looking for a Long trade. This trade was triggered.

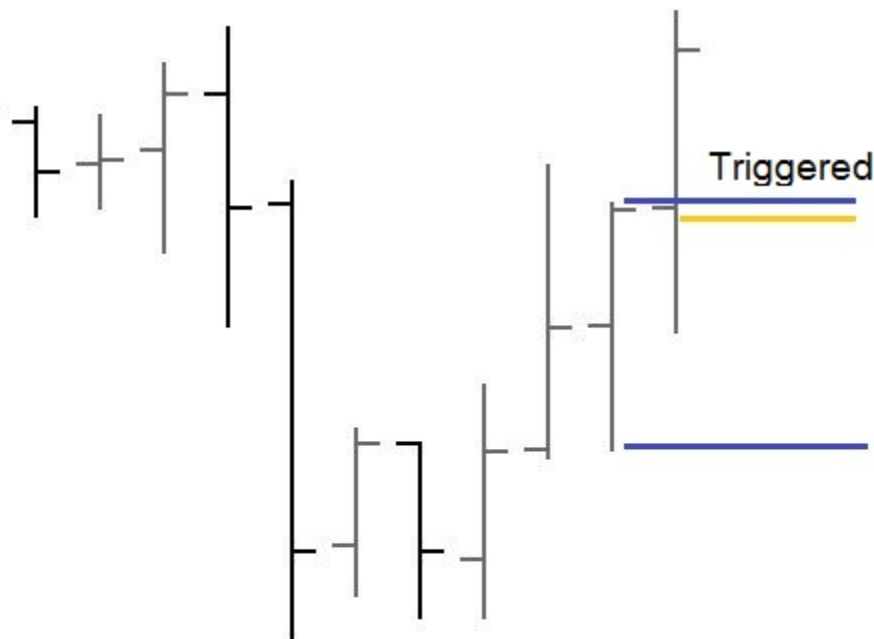

Long trade not triggered.
An Inside bar (IB) was formed.

A long trade was triggered.

In this case, depending on your Money/Trade management, this trigger could have been an add-on.

And long again!!!!!!!

Looking for Long trade.
No trade triggered

The setup was for a Short trade, so No trade was triggered.

_ If you are a conservative trader you would have been taking some profit and moving up your stops, maybe leaving on a runner!!!

_ If you are an advanced trader, you may have opted to take the upside break of the inside bar?!
