Forex Robot

- Magic number is auto-calculated..
- Lot size is auto-calculated using formula AccountBalance() / 100000.
- Only one basket is allowed open at any one time.
- Index is calculated using M15, H1 and H4.
- Trend is calculated using D1.
- Take Profit is auto-calculated using formula Lot size * 100 * Number of trades.
- Only attach Forex Robot to one chart being GBPJPY.
- It will trade AUD, CAD, CHF, EUR, GBP, JPY, NZD and USD indexes.
- It does not trade Sundays.
- You should only run this on a demo account.
- Forex Robot is encrypted using GUARDIAN.
- There is no Stop Loss.
- Trades are triggered if we have a red index and green trend or green index and red trend. So, if our broker supports 7 pairs we need (+/-) 5 in the trend column, if 6 pairs then we need (+/-) 4, if 5 pairs then we need (+/-) 3.

The only user input parameters are the ones listed below.

Parameter	Description
Trading.Allowed	Do we want to take trades
Friday.Close.Hour	Hour to stop trading on a Friday
Trade.Comment	Comment for trades
Close.Trades	Emergency close all open trades

If Forex Robot is running properly then you will see a screenshot similar to the one below.
