

Don't contact Dean Malone about the TDI. The way he uses it for his method is 180 degrees from how we use it... you need to learn how to use it our way...

The TDI is the heart of our method. It tells you when to enter and where to exit any trades... so review previous posts and learn it good.

HA Candles are important because it makes your trading way less stressful... use them.

Stoch's is nothing but confirmation. If Stoch's & the TDI give different signals... lights flash off and on warning me to take a closer look before entering.. and usually I look for another trade.

5 ema... shows direction currently... only wanting to enter on candle 1 or two. If there is a reversal do I have a TDI signal to enter... if not and all looks strong then enter on candle 2... use some discretion... practice on Demo... take some chances and see if yor head computer was right... it's free.

HA Candles... What are their size? If they are small I will usually go find another set up... Look for consolidation... look for how close PA is to supp/res levels... use your brain !

Believe it or not you have to participate and think... until it's so second nature... there is nothing to it... it's so simple... don't complicate it or you will lose...

TDI is RSI  
the Relative Strength Index of the Price.  
We trade the Trend of the Moment on  
our Trading charts.  
Learn and identify the Price trend and  
the RSI trend. Trade only when both  
these are in synergy.

Learn and identify  
reversal and consolidation  
on your trading charts.
