

## USD/CAD

On the weekly chart, we can see, that we are in an overall uptrend and we had a pullback over the last months. Now we can continue trading long after the engulfing candle two weeks ago. Last week the PA stayed in the range of the big bullish candle (I think it is called Mothercandle.) I would suggest buying this week, when the PA breaks the high of last week at 1.30000. I would set my target at 1.31500, we can see on the D1 chart, that there is the next resistance area. On D1 chart, we can also see, that the TDI is over the 50 line and the yellow line.

## GPB/USD

Last week the PA broke the low of the bullish wide range bar. I think we can continue selling this week. As always, I suggest to wait until the PA breaks the last weeks low and the low of the last daily candle. We can target 1.42500 and make 1.41000 the second target. On the D1 and H4 we see that the TDI is under 50 and under the yellow line.

## EUR/AUD

I think EUR/AUD will continue the buying movement until it reaches 1.60000 or 1.61500. You can see on the D1 chart, that we are in a bullish wide range candle. Last weeks high is at 1.56000. When the PA breaks the high of last week and the high of the D1 WrB we can start buying. But look for the TDI on D1 chart because it is almost at the 68 line.
