

Deutsche Bank – Credit Overview

June 2017

Summary

Deutsche Bank today

- Progress - wind-down of the non-core unit and resolved a significant number of large litigation items
- Successful execution of the strategic measures over the next few years will further simplify and de-risk the bank while improving efficiency and the service we provide to our target clients
- Strength of the balance sheet gives time and flexibility to execute the strategic plan
 - DB is well positioned to meet all current and future regulatory requirements. CET1 capital ratio⁽¹⁾ above most peers
 - Cash and high quality liquid assets account for more than 20% of DB's funded balance sheet, negatively impacting returns but providing further support
 - Over 70% of the balance sheet is funded by long-term, diversified sources

Creditor / Counterparty considerations

- German bail-in law provides greater protection for various creditors, such as depositors, derivative counterparties, beneficiaries of guarantees and letters of credit (LoC's), holders of structured notes and money market instruments by subordinating plain vanilla senior unsecured debt
- As a result, senior unsecured ratings and CDS prices are no longer a good reflection of the credit worthiness of a bank
- All Rating Agencies have separate counterparty obligation ratings, covering - depending on the Agency - products such as deposits, derivatives and guarantees/LoC's
- Ratings should stabilize at current levels with upgrades expected after several profitable quarters - DBRS changed the outlook from 'negative' to 'stable' in June 2017

(1) Includes the proceeds of the rights issue completed early April

Deutsche Bank at a glance

In € bn

Key figures (Q1 2017)

IFRS assets	1,565
Leverage Exposure	1,369
Risk-weighted assets ⁽¹⁾	358
Common Equity Tier 1 capital ⁽¹⁾	42.5
Tier 1 capital ⁽¹⁾	47.0
Total capital ⁽¹⁾	59.5
CET1 ratio / Pro-forma ⁽²⁾	11.9% 14.1%
Leverage ratio / Pro-forma ⁽²⁾	3.4% 4.0%

Revenues by business⁽³⁾

Q1 2017

Leverage exposure by business⁽⁴⁾

31 March 2017

Note: Figures may not add up due to rounding differences. GM – Global Markets, CIB – Corporate & Investment Bank, PW&CC - Private Wealth & Commercial Clients, AM – Asset Management, NCOU – Non-Core Operations Unit

(1) Numbers do not reflect the impact of the ~€8bn capital raise completed in early April

(2) CRR / CRD 4 fully loaded. On a phase-in basis in Q1 2017: Risk-weighted assets: €357bn, Common Equity Tier 1 capital: €45.1bn, Tier 1 capital: €54.3bn, Total capital: €61.0bn, Common Equity Tier 1 ratio: 12.7%, Leverage ratio: 4.0%. Pro-forma CET1 and leverage ratios including the proceeds of the rights issue completed in early April

(3) Q1 2017 revenues of €7.3bn included revenues for Consolidations & Adjustments of €(372)m that are not shown in this chart

(4) 31 March 2017 leverage exposure of €1,369bn included Consolidations & Adjustments exposure of €44bn (3%) that is not shown in this chart

A safer and more secure organization

In € bn, at period end, unless otherwise stated

(1) Liquidity reserves include cash, highly liquid government, agency and government guaranteed bonds and other Central Bank eligible securities

(2) Most stable funding as a proportion of the total €1,005bn external funding profile. Most stable funding is defined as funds from Capital Markets & Equity, Retail, Transaction Banking and Wealth Management deposits

(3) Value-at-risk (VaR) is the average risk of loss for Deutsche Bank's trading units (excluding Postbank) based on a 99% confidence interval and a one-day holding period

(4) Level 3 assets tend to be less liquid instruments where fair value cannot be determined directly by reference to market-observable pricing. Examples would include more-complex OTC derivatives, distressed debt and highly-structured bonds

Well positioned for long-term regulatory requirements

Fully loaded	Q1 2017	Group targets		Regulatory requirements	
				Q1 2017	Comments
CET 1 ratio	14.1% ⁽¹⁾	Comfortably above 13%	CET1 ratio (phased-in)	14.9% ⁽¹⁾	~€19bn CET1 capital above 9.5% SREP requirement ⁽²⁾
Leverage ratio	4.0% ⁽¹⁾	4.5%	Liquidity coverage ratio (LCR) ⁽³⁾	148%	~€71bn above 2018 100% requirement ⁽³⁾
			Total loss absorbing capacity (TLAC) ⁽⁴⁾	33% RWA / 8.6% Leverage exposure	~€36bn above 2019 minimum requirements ⁽⁴⁾

(1) Includes the proceeds of the rights issue completed early April. Capital accretion from DeAM minority IPO and disposal not included in pro-forma capital levels

(2) Represents DB's capital above the CET1 requirement contained in the ECB 2017 SREP letter

(3) LCR is designed to promote the short-term resilience of the liquidity risk profile of banks by ensuring an adequate stock of unencumbered high-quality liquid assets that can be converted in private markets into cash to meet their liquidity needs for a 30 calendar day liquidity stress scenario. Based on EBA Delegated Act

(4) Based on final FSB term sheet requirements of higher of: 16% RWA (plus buffers) and 6% leverage exposure from 2019 and 18% RWA (plus buffers) and 6.75% leverage exposure from 2022. TLAC includes instruments issued by DB AG or DB-related trusts with time to maturity or time to call > 1 year; nominal values. Includes all non-callable plain-vanilla senior debt (including Schuldscheine and other domestic registered issuance) > 1 year, irrespective of issuer jurisdiction and governing law

Strong credit quality versus peers

Stressed credit losses vs. European peers

ECB stress test net credit losses in adverse scenario.
Impact on CET1 ratio, in bps

Net credit loss provisions⁽¹⁾ well below US peers

- Leverage is a very crude instrument that does not take into account the risk profile of various assets
- DB's credit losses best in class versus European and US peers
- Credit loss provisions materially below US peers reflecting the lower return / lower risk nature of the credit portfolio
 - Retail portfolio is predominantly mortgage driven (>80%) with a strong bias to Germany
 - ~70% of corporate exposure⁽²⁾ to Investment Grade counterparties

(1) Credit loss provisions divided by gross loan book. US Peers: Bank of America, Citigroup and JPMorgan

(2) Based on DB internal ratings. Corporate exposure includes loans, irrevocable lending commitments, contingent liabilities, OTC derivatives and debt securities

Derivatives exposure – headline numbers materially overstate the economic risk

IFRS Derivative trading assets and the impact of netting and collateral

In € bn, as of 31 March 2017

Note: Figures may not add up due to rounding differences

(1) Excludes real estate and other non-financial instrument collateral

(2) Master netting agreements allow counterparties with multiple derivative contracts to settle through a single payment

Comments

- Gross notional derivative exposure amounts are not exchanged and relate only to the reference amount of all contracts. It is no reflection of the credit or market risk run by a bank
- IFRS balance sheet derivatives trading assets are the present value of future cash flows owed to DB and as a result represent the credit risk to the Bank
- Unlike US GAAP, IFRS accounting does not allow for all master netting agreements⁽²⁾ to reduce derivative assets shown on the balance sheet
- DB's reported IFRS derivative trading assets of €421bn would fall to €31bn on a net basis, after considering the master netting agreements in place and collateral received
- In addition, DB actively hedges its net derivatives trading exposure to further reduce the economic risk

Agenda

1 Deutsche Bank today

2 Creditor / Counterparty considerations

Changes to German insolvency law have strengthened position of depositors and counterparties

In € bn

- Creditors, including depositors, derivative counterparties, beneficiaries of guarantees and LoC's, structured note holders and money market instruments sit above €59bn of equity, Tier 1 and Tier 2 instruments and also €58bn of senior plain vanilla debt liable for bail-in
- Deutsche Bank has €118bn of Total Loss Absorbing Capacity (TLAC). Senior plain-vanilla debt < 1 year will not qualify as TLAC but still represents loss-absorbing capacity
- CDS & senior unsecured bond yields are no longer appropriate risk proxies for the entire Deutsche Bank Group, given the lower ranking of plain-vanilla senior unsecured bonds under the German bail-in law

Note: Figures may not add up due to rounding differences

(1) Insured deposits and deposits by credit institutions and investment firms with original maturity <7 days are excluded from bail-in

(2) Deposits >€100k of large caps, all remaining deposits of financial institutions and the public sector

(3) Includes all plain-vanilla senior debt (including callable bonds, Schuldscheine and other domestic registered issuance) > 1 year, irrespective of issuer jurisdiction and governing law

(4) Regulatory capital under fully loaded rules; includes AT1 and T2 capital issued out of subsidiaries to third parties which is eligible until 2021YE according to the FSB term sheet. Includes €1bn of adjustments reflecting TLAC eligible capital instruments that don't qualify as fully loaded regulatory capital; add-back of regulatory maturity haircut for T2 instruments with a maturity >1 year, G-SIB TLAC holding deduction

Rating methodologies increasingly reflect new resolution regime and therefore require more differentiation

		MOODY'S	STANDARD & POOR'S	FitchRatings	
Counterparty Obligations (e.g. Deposits / Derivatives/ Swaps)		A3 (cr) ⁽¹⁾	A- ⁽²⁾	A ⁽³⁾	Reflecting their position in the resolution hierarchy, the deposit and counterparty ratings are the relevant rating for >95% of DB's clients
Long-term Preferred Senior Unsecured ⁽⁴⁾		A3	A-	A (emr)	All DB's long-term senior unsubordinated unsecured debt ratings are in the A range
Non-Preferred Senior Unsecured	Long-term	Baa2	BBB-	A-	
	Short-Term	P-2	A-2	F1	

Note: Ratings as of 26 April 2017

- (1) Moody's Counterparty Risk Assessments are opinions on the likelihood of default by an issuer on certain senior operating obligations, including payment obligations associated with derivatives, guarantees and letters of credit. Counterparty Risk assessments are not explicit ratings as they do not take account of the expected severity of loss in the event of default
- (2) The Issuer Credit Rating (ICR) is S&P's view on an obligor's overall creditworthiness. It does not apply to any specific financial obligation, as it does not take into account the nature of and provisions of the obligation, its standing in bankruptcy or liquidation, statutory preferences, or the legality and enforceability of the obligation. S&P is currently conducting a request for comment on the implementation of Resolution Counterparty Ratings (RCR). For European banks they expect the RCR to be initially assigned one notch above the ICR
- (3) A assigned as long-term deposit rating, A(dcr) for derivatives with third-party counterparties
- (4) Defined as senior-senior unsecured bank rating at Moody's, senior unsecured structured rating with embedded market risk at Fitch, senior unsecured at S&P

Rating Agencies are adjusting their methodologies to reflect bail-in risk of senior instruments

Moody's S&P

Operating company / Preferred Senior⁽¹⁾

Holding company / Non-preferred Senior⁽²⁾

Rating scale			EU Peers				Swiss Peers		US Peers				
Short-term	Long-term		BAR	BNP	HSBC	SOC	CS	UBS	BoA	Citi	GS	JPM	MS
P/A-1	Aa2/AA												
P/A-1	Aa3/AA-												
P/A-1	A1/A+												
P/A-1	A2/A												
P/A-2	A3/A-												
P/A-2	Baa1/BBB+												
P/A-2	Baa2/BBB												
P/A-3	Baa3/BBB-												

- Note: Data from company information / rating agencies, as of 26 April 2017. Outcome of short-term ratings may differ given agencies have more than one linkage between long-term and short-term rating
- (1) Senior unsecured instruments that are either issued out of the Operating Company (US, UK and Swiss banks) or statutorily rank pari passu with other senior bank claims like deposits or money market instruments (e.g. senior-unsecured debt classification from Moody's; senior unsecured from S&P)
- (2) Senior unsecured instruments that are either issued out of the Holding Company (US, UK and Swiss banks) or statutorily rank junior to other senior claims against the bank like deposits or money market instruments (e.g. new rating category in France: Senior non-preferred bonds from S&P)

CDS spreads do not reflect Deutsche Bank's risk or funding costs

CDS spreads have had limited correlation with DB's cost of funding or issuance plans

— DB 5yr EUR-CDS in bps — DB average issuance spread, in bps⁽¹⁾
■ DB debt issuance, in € bn

Comments

- Single-name CDS trading volumes are lower than pre-crisis making movements in prices more erratic
- The movement in Deutsche Bank CDS spreads since early 2016 reflects the introduction of the German bail-in law on 1 January 2017
 - Senior unsecured debt (which CDS spreads reference) is legally subordinated to deposits and operational liabilities
 - CDS can no longer be viewed as a proxy for the probability of default for the entire Bank
- As a result of the lower volumes and bail-in law, there has been limited correlation between Deutsche Bank's CDS spreads and the Bank's funding costs

(1) Based on the 4 week moving average issuance spread vs. 3 month Euribor. AT1 instruments excluded from spread calculation

Cautionary statements

This presentation contains forward-looking statements. Forward-looking statements are statements that are not historical facts; they include statements about our beliefs and expectations and the assumptions underlying them. These statements are based on plans, estimates and projections as they are currently available to the management of Deutsche Bank. Forward-looking statements therefore speak only as of the date they are made, and we undertake no obligation to update publicly any of them in light of new information or future events.

By their very nature, forward-looking statements involve risks and uncertainties. A number of important factors could therefore cause actual results to differ materially from those contained in any forward-looking statement. Such factors include the conditions in the financial markets in Germany, in Europe, in the United States and elsewhere from which we derive a substantial portion of our revenues and in which we hold a substantial portion of our assets, the development of asset prices and market volatility, potential defaults of borrowers or trading counterparties, the implementation of our strategic initiatives, the reliability of our risk management policies, procedures and methods, and other risks referenced in our filings with the U.S. Securities and Exchange Commission. Such factors are described in detail in our SEC Form 20-F of 20 March 2017 under the heading “Risk Factors.” Copies of this document are readily available upon request or can be downloaded from www.db.com/ir.

This presentation also contains non-IFRS financial measures. For a reconciliation to directly comparable figures reported under IFRS, to the extent such reconciliation is not provided in this presentation, refer to the 1Q2017 Financial Data Supplement, which is accompanying this presentation and available at www.db.com/ir.
