Risk Percent ---- % number of your account that you are willing to risk for each trade (Default is 30)

Start Hour ----- Start EA working Hour / End Hour ---- End EA working hour.

IMPORTANT

The Accumulator EA was designed to work from 18:00 to 24:00 (FXDD server time) or from 16 to 22 GMT. Please change the start/end working hours according to your broker's server time.

You can know your broker's server time from the market watch screen.

RUNNING THE EA

After installing and running the Accumulator EA, you should see a smiley face at the right side of your chart with the name “Accumulator” next to it.

That means everything is fine and the EA was installed successfully and working on your metatrader4 platform.

All that you need to do is to run the EA at the working hours every day. There is no need to host your MT4 on VPS 24/5.

Please remember to adjust your money management settings – lot size and/or turbo mode and/or risk% – according to your trading plan.

Never risk more than 5% of your total invested capital. Using more than 5% is high risk and Not recommended for beginners.

If you want to use a fixed lot size number without increasing it when you gain profits, simply turn the Turbomode off/False.

The recommended pairs for this EA are EUR/USD, GBP/USD, USD/JPY and USD/CHF. the best time frame to use is 1M time frame.

The EA was tested with FXDD “broker company” if you don’t know or not sure of the results you may have with a broker, then use it with FXDD.

If you are using any other broker, make sure that EUR/USD spread is not more than 3 pips and don’t forget to change the working hours according to the market watch.

For any help or questions about the EA, please contact us anytime. Allow 24 hours for us to reply.

Thank you,
Paul Liburd

FAQ

I can't see the exe file to install the Accumulator software, there is only an ex4 file?

The ex4 file is the correct file. Just copy/paste that file "AccumulatorII.ex4" into metatrader4/experts folder . then restart metatrader.

What time frame/currency pair is best to use with the Accumulator EA?

The recommended pairs for this EA are EUR/USD, GBP/USD, USD/JPY and USD/CHF. the best time frame to use is 5M time frame.

Why do I get different backtest results than the one shown in your website?

There are many factors that could cause this, please test on FXDD MT4 and with the same currency pair – EUR/USD – and the same time frame – 5M – then make sure that you are using the default settings with the right starting capital of \$10,000.

Why the screen shot of EA settings in the manual shows different settings than the default – written – settings that you recommend?!

The EA can be used with many different settings. The recommended settings – default – are the ones used to get the advertised results. so there are no – right/wrong – settings. You are free to use the defaults or test the EA with different numbers.

Does it use Hedge?

No

The new NFA rules doesn't allow limit orders or stop loss, does your EA works with the new rules without a problem?

The EA doesn't use hedge or limit orders, but as you can see from the settings input window it uses stoploss and targets. So the best thing to do to avoid this is by using the EA with a different broker. Like FXDD.

I have \$500 to trade with, is this good enough or do I need to start with big accounts like \$5000 or \$10000?

With a broker that allows mini and micro accounts, you can start by any capital. Even \$100. But .. you must change the EA risk settings to work with small account. Specially the lot size and risk%. For example : change the the lot size from 1 to 0.01 and risk% from 40 to 3 or 5.

I have done everything said in the manual, but the EA is not working, what's wrong?!

First, make sure that your broker allows using auto trading software. Second, make sure that your metatrader4 platform allows auto trading. If after following the steps in this manual you can't get the EA to work then you should contact your broker's support or Metatrader4 support or read Metatrader's manuals or help section.

I don't know how to use an EA, I can't make it work ?!

There are many websites that you can review to learn how to use EAs. They are all free online and the editors provide simple and easy steps to follow and It would only take few minutes of your time. If there is anything you couldn't understand, please contact us and we will do everything we can to help.

I don't understand the build in money management system, how does it work, is it safe to use?

The EA uses special money management system that would help to get the best results and keeps your invested capital safe.

If you don't feel comfortable with it, just turn it off by changing the setting from True to False.

I got your EA two days ago and it made 3 losses and 1 winning trade out of 4 trades. Is this normal, why is it losing money?

If it didn't lose money then it wouldn't make any money either. Losing is part of the game, if you can't understand it or doesn't accept it .. then you better not to trade at all.

And .. You only used the EA for "2 days" ☺ and that's not enough time to judge the performance. Not even 1 or 2 weeks is enough time, to test any system you should do so for at least 1 or 2 months.

It's highly recommended to NEVER use a trading system – auto or manual – on live accounts before testing them on demo first.

Again .. It's highly recommended to NEVER use a trading system – auto or manual – on live accounts before testing them on demo first.

For many reasons. Examples: maybe the sellers are scammers and the EA or manual system is junk – maybe you don't understand how it works yet and need time to understand it and feel comfortable with it – maybe you are using the wrong broker – maybe you forgot to adjust one single setting that could totally reverse the performance!

Trading is not a video game. And it's not gambling. Your first goal is to keep your money safe before thinking about making any more money. And you have many ways to test the system you are using, the best are demo trading and backtest.
