

USD CAD

30-AUG-2009

Analysis:

- 1hr Awaiting Kumo clearance
 With a long kumo breakout we will have a weak bullish ts/ks cross signal (chikou span confirmed)
 With a short kumo bounce we will have a bounce of ts or a strong bearish ts/ks cross signal (chikou span to be confirmed)
- 4hrs Awaiting Kumo clearance
 we have top flat kumo attracting price so caution needed for long kumo breakout
 with a bounce we will be in the cloud for a while
- Daily Price is in pullback state supported by a weak bullish tenkan/kijun cross signal
- Weekly Price is below the cloud supporting short trades

Pref positions: Long positions once 1hr and 4hr Kumo will break and support them but for scalp some pips (Res: 1.0975, 1.1000, 1.1015, 1.1070)
We will check for short position with a bounce on H1 Kumo and price constantly under the H1 kumo
