Quoting alakader

Hi, first post here, thanks for all the support this tread offers short EG based on PA near R38 with TDI down up to 1H, and divergence on 4H {image}

You guys stop mentioning divergence or I am going start banning people out.I don't give a fk what you read about Divs but on this thread there are not factored at ALL! NoNE! Its just oscillator catching up with price and nothing more!You got to get this amateurish shit out of your minds!

I believe after FEDs USD may collapse since lot has been priced in. Opportunities are great buying other majors
NU AU GU prime examples
Both NZD and AUD have been great fundamentally NZD unemployment and Job creation was green and both are on solids grounds.
We may soon see Trump investigation taking off and may weaken USD in addition of profit taking after Feds.

There are many reasons that I don't use Divergence in my trading. For once and all I don't want to read about this and you will get kicked out if you do mention it.

Divergence is how Oscillator catching up with price and as such it has zero bearing on price! Its basically a lagging indicator showing what has transpired.

Divs signal can show sell for example on H4 and Daily and price can climb another 100-500pips north irregardless what shows on its graph.

Divergence will always occur when there's a sharp (big movement in a short amount of time) move followed by less sharp movement. This is actually what divergence is meant to capture, as many traders believe that if price movement slows down **it's poised for a reversal. This is a myth.**

The two main problems with divergence is that it often signals a (possible) reversal but **no actual reversal occurs—a false positive**. The other problem is that divergence doesn't forecast all reversals. In other words, **it predicts too many reversals which don't occur, and not enough real price reversals.**

No wonder typical retail trader losses because they believe common trading myths...

[Quoting victorezeaku](#)

{quote} Yes I know this is not what you advise. But How do I trade if my work does not permit me to monitor and confirm trade with TDI. That is my biggest challenge. The only option i have at the moment is to use limit orders and buy stop orders around pivots. I only have time during asian sessions. I work from London Session to New York session. Please what is your advise on this. Thanks

Let me tell you something so you understand what it takes.I have full time job, 2kids,mortgage and daily errands and taking care of family matters and I trade and maintain a thread here! You know how I do it? I wake up some nights 3times and trade sleep 2hrs then wake up trade some more and answer questions like yours and then trade some more take a nap then go to work.

You know why I hit 15-17 23% a month because I want success very badly and sacrifices every comfort to get there!You know what pisses me more? People who think they can reach success with ease and eat their cake in the process.Not gonna happen! You want to make it you

must go that extra mile.

I am going to remove you its not personal but I can't have people here fking my system with BS.
Green journey!

On Serious note: CAD/CHF. i am on sidelines coz i think it has 100 points more left in it (north side). Well, that's my thinking and i can be wrong but short term there is opportunity. I am waiting for next week on either direction. Good luck

Its same as EC only inverse. Watch pivots and don't sell at S61-100 or buy at R61-100

Follow this rule strictly. Forex is all about swings when price reaches at key pivots it has exhausted and likelihood of correction is great.

I am waiting for next week on either direction. Good luck

Let me make it easy on all those who admittedly find it hard to read like 906 pages of this thread:

- 1) We don't trade CHF.
- 2) Divergences are meaningless (even on TDI).
- 3) Only this week's pivot levels matter.
- 4) Never buy into resistance, nor sell into support.
- 5) Trade long when S61 or better (short when R61 or better) and look for fundamentals and technicals (PA) to be in alignment.
- 6) Moving averages (even crossovers) are meaningless. Location is what matters.
- 7) Look left.. Price structure leaves clues for the future.
- 8) TDI arrows are your friend, but D1 and higher (W, MN) need not be in the direction you want. Do not trade long if one of them (H4 and lower) are red (black is ok).
- 9) Don't trade hyper pairs like GN and GJ.
- 10) Look at daily ADR for exhaustions (above 100%).

Anything can happen.

This message will self destruct when [CindyXXXX](#) gets reinstated. LOL 😊

Did I miss anything guys?

From the idiot cindy

<https://www.forexfactory.com/showthr...98#post9964198>

Interesting and revealing post

"

Nearly there, after 2 years of starting all over again and maybe 1 of those years to accept and fully come to terms with the fact that everything I had DONE, LEARNED, and SACRIFICED in the past **5-6 years was a COMPLETE waste of time... (says something about you have totally opposite experience myself!)** I am proud to sit here with this curve still making **the same old mistakes (after 6yrs making same mistakes slow learner for sure or total ineptitude)** but now more ready to confront and deal with them. No longer looking to get rich by Christmas but **simply grow surely. As first a human being (you failed at this clearly trolling on my thread)** and then a trader. A near bankruptcy, heart break, manic depression, drinking problems, unemployment, phew so much can happen in just 2 years..

I am proud to be sitting here today with this Dog that looks like a couple of rocks with penises that mum will proudly stick on the fridge. This curve won't mean much to any but only I know the true meaning of it. This was 43 rounds with the market. The real market, all

individual trades/ decisions and I fked up a lot of them.
I laughed when my mentor said it would take 2 years.. No not me, I will get it tonight and if not tonight by next month... f idiot. Of course these results are not representative % wise of results when I put more money in but still learning,still testing **still practicing with peanuts (no wonder 65k live account is unimaginable to you!)** until I meet the conditions that were first laid out to me so long ago now, conditions I failed to obey and nearly paid with my life. In many ways I did
But I truly see it now, many things to work on and fix but I'm ready kid, thank you so much you know who you are"

So fking asshole you have traded 10yrs and after 10yrs still practicing with peanuts and you have the audacity and stupidity to question me! **We are not even on same league you fking moron!**

Have been saying this a lot but worth a refresher. Spikes often occur swing ends and this is mainly caused by both profit taking and more importantly large orders getting filled which is designed to trigger stops and create liquidity to get filled.

When you see spike at 61-100 it could be a good thing meaning institutional positions are taking opposite of spike.

Market liquidity is considered to be "an asset's ability to be sold without causing a significant movement in the price and with minimum loss of value." Big market players with huge orders are not able to trade like the smaller retail traders. When they initiate a position, a substantial order often needs to be filled and price can easily go against them; this comes as they create a large imbalance in the supply and demand. Markets move as a consequence of the liquidity between the bid and ask prices.

AJ today as good example

{quote} I am wonder type! 😊 I could have blindly follow your " signal service " and probably be in profit but I always ask myself " why he did this and that " I mostly on the road like right now and don't have my pivots for that pair in front of me so I couldn't analyze better. Thank you for answer I have never asked 😊 . Even day chart have good reversal pattern with minimal risk.

To understand market structure and order flow is important. Usually takes good number of screen hours time. Most new traders are poorly informed about this and why their stops get overrun on constant bases hence blowing up accounts.

My system is designed to take advantage of spikes and shelter from it by having smaller positions and wider stops.

This is not the norm in general. Most trading books are actually written

by book "traders" and most often suggest stops 20-30pips which is basically guaranteed to be hit.

So since we have little downtime before NFP lets go over what we do or I do often

Swing low price at 100S everything looks good TDI moving north anglator has at least 30min green You entered long. Price went up 50pips and stalled could not break higher.You decided to get out.

Price drops again testing 100S again what do you do?Obvious move is to reload long again since price could not BO 1st time.

I do this until it breaks out or decide not trade at all if something fundemetal keeping it going north.

Repeat trades are very lucrative in out 💰 wait bounce or dip reload 💰 repeat until price reaches key pivots.Note not every pairs breaks WP in strong down trend or up trend it may not reach WP.

I may make a video how to do this....its hard explaining at times seeing it on screen is better live

notice EA daily open blue line is providing resistance and this could drop testing lows again.This could work out classic repeat trade.

Hi guys

Posting from LA. My brother's situation is not good and I came down with inflamed gums due to stress and I am on antibiotics. Flying back to Boston tonight and will trade next week.

I read many BS and strange posts guys **demanding** that I share my Floating PL and their contribution to this thread is **ZERO~!!**

I have my reasons why I don't share my stats fully or post live TE and be glad that I shared here as much as I have with **no charge to you** a system that to intelligent person is a goldmine! I have pages and pages of PM's guys thanking me and sharing me in private how much they are making and how their trading changed fundamentally for better. Had I sold you a system then you have the right to full disclosure and since its not the case asking and demanding this is highly disrespectful. I could just stop posting flat out at FF and frankly have many professional traders advising me to do so and are surprised I shared here how I trade.

Look around guys how many successful traders are here at FF and how many share what and how they trade. Hardly anyone.

Anyway green pips

Results for the week of May 6th - May 11th. The charts and fundamentals will tell you what to do. Do your homework. Be patient. Let the trade come to you. Take the loses. Move on. Happy hunting!!!! {image}

Hi Brian

You had some great trades but I think and I could be wrong since I don't know your account size but you are trading 001 lot and 50pips move nets you 5 dollars.

You took over 400 trades and your biggest trade was under 10 dollars.

My advise is show more discretion and increase lots on pairs that have A+ set ups so you are collecting better returns. If what you are doing working good for you then simply dismiss my post. I thought to share how I would approach it myself.

Lets say

A+ set ups 30C a lot

A set ups 20c a lot

B set ups 10C a lot

If you personalize losses, you can't trade-Bruce Kovner

When I try to learn something new. I read how others have done it before me, I go through the steps and put those steps in graphical form if possible. If it works once, I try to do it again and keep repeating it until I get consistent with it. I hope the below illustration helps. It is how I see the 1st post of this thread. {image} See if you can see the same thing below. All we have to do is, repeat what works and be patient. {image} kindest regards

Thank you

You have been great!Showing following principles shared here with solid results. 💰👊🍺

Disliked

Hi V

I think I stated on my 1st post this system requires minimum 2yrs experience and by this time one should already FIRMLY understand what floating loss is and what equity is and balance and why it is easy to have extremely high winning rate and still blow the account.

You are making demands that I should show individuals like you who have ZERO posts trading my system about details that are private. I do take losses and I am very strict keeping my DD in check or I would not have lasted 2+years trading this system without blowing my account. Your entire argument is pointless since this is my thread my system and this is how I trade and if you don't like it just make your presence gone.

I am not going to ban you because I don't want folks like you going around forums sharing and trolling that I am being unreasonable!

Hi Guys

Its becoming pathetic that some people just can't stop attacking me, demanding disclosures and yet don't even trade my system. Accusing me of fabricating illnesses family issues...and this last part got me scratching my head....how pathetic even this line of thinking. Last year when my younger son almost died from lung collapse and I and my family went some painful experiences which I don't wish on anyone and that month July I did not do well in trading. My head was not on it and I had one demeaning nasty individual accusing me same fabricating my son's illness and basically out of cheer anger I posted my son on hospital bed tubes going out of him...still this fool SOB could not and would not stop and now we got another wave of same deranged idiots accusing me again about my brother illness....so sad pathetic that these guys resort such low level behavior that even shit-fly would not do.

Le me say this again.

Everyone has a free choice!If you are not making profit from my system please STOP and leave Now! and if you are making good profit then ignore the idiots and carry on!

You know how you can tell a fking brainless imbecile how they respond to a post. Check out simple long position and this Mfer's response!

His response is typical of morons who think they know the future for certain! Anyone with grain of intellect knows its just probability game and you can be wrong anytime hence calling someone an idiot for going long is oxymoron!

and this piece of shit has the audacity to comment about me? fking loser!

[Quoting Ill-b-back](#)

{quote} And can you imagine the dipshit, uninformed, ill conceived comments that would come your way if you showed your floating losses. People would see all the entries, see 80 pips drawdown and assume you were about to bust your account. You would have to be continually explaining to each person your rationale and percentage drawdown suffered. And why? Because you're kind enough to share everything else about this system that makes money, and they can't be arsed reading the first post that talks about drawdown and how you calculate YOUR SL. Am...

Exactly FF is full of time wasters! you can tell who is who by quality of trading and posts!

Not going to open everything here if anything I already shared too much!

and **shit fly is attracted to shit heispark**

This guy posts that I am scalping and after I explained 50pips + trades are swing trading NOT scalping then comes back accuses another poster trading TMS and Mr AussiFX explained not the case then this bozo comes back posting I allow 20-30% DD all these inquires and this idiot does not even trade pivots!!!

Really? It looks like this guy had one track mind and bent on misreading and deliberately or naturally BEING AN IDIOT. such is realty at FF

i took two trades today both hit stoploss, maybe i did something wrong GBPJPY i just take sell entry on S38 resistance in 1 hr chart with a bearish pinbar {image} {image}

you have reading issues to begin with

from page 1 in addition to what Cryptosurf posted

Note **very important this system does not work best with hyper pairs that usually have over 120pip** 20day period ADR like **GJ** GA GN etc

From numerous trial and errors **low ADR pairs fits the best in my method**

Pairs I trade most often

UC AC NC EA AU GU NU AN EU Yen crosses like CJ NJ AJ

removed boneheads like you don't get a second chance!

EA on the move!! Nice!! {image}

That's all you guys should do! Everything is on page 1.

Nail 1 batch of trades after another and see your account grow.Ignore the idiots!If this method didn't work I would not be here after 2yrs trading same indicators and template!

Once you understand power of probability and the Edge and proper psychology to trade rest is mechanical doing same over and over until it becomes like bicycle riding when you don't think about it anymore you just ride.

Will take time to get this stage but its doable

so far **this week** even though its been rough PA
Was in nice profit on EU but thought it had lot more in the tank but PA could not push higher. That's just trading does not work out always what you expect
People always posting post analyses on chart with hindsight trading look great but reality of live trading is different.
This is the main weakness of guys trading Andrews Pitchforks. Things only look great after the fact.

UC is becoming nice fat cat for me 😊🍺

may drop to S61 where my TP is projecting 2730

Might drop before Feds Minutes Weds.I get the feeling USD needs to weaken more in order to hike more rates otherwise may cause global

crises since most of the emerging economies own their debt in USD
Strong dollar actually not very good for US economy.

{quote} Full transparency here - UC about an hour ago - {image} UC now {image} Still very much valid though in my opinion P.S Yes I use SL's sometimes, shoot me.

Hi S

You don't have to justify your trades,Its your money ...having said this your sl too tight

Its not if its basically going to get hit.Feds minutes weds and I anticipate USD getting more beating before it hence UC dropping further is highly likely.

The reason you do the Calendar so you have an awareness of these things.

{quote} Hi Davit, Very good point.. Just don;t want to be that guy that posts an entry and then goes quiet and doesnt mention it if it goes against me! My reasoning for the sl is that if it breaks out of that range southward then that would invalidate the trade for me at this time and i'd wait for another entry at a lower pivot level. Thanks and I appreciate your advice

did you read my fundemetal perspective? It doesn't seem you get it.Nobody cares if you placed an order live or not.Its not a contest.

Major milestone on my trading account hit 70k

Jan at 40k 30k gain over 10% gain a month exceeding my expectations. 🍷🍷🍷🎸

This is after taking 6k for monthly mortgage payments

after 2days of trading this week. I really don't care if you are skeptical I am not here to prove idiots anything. Most if not all trades are posted here!

Hi Guys thank you for all your support and lets continue making 💰

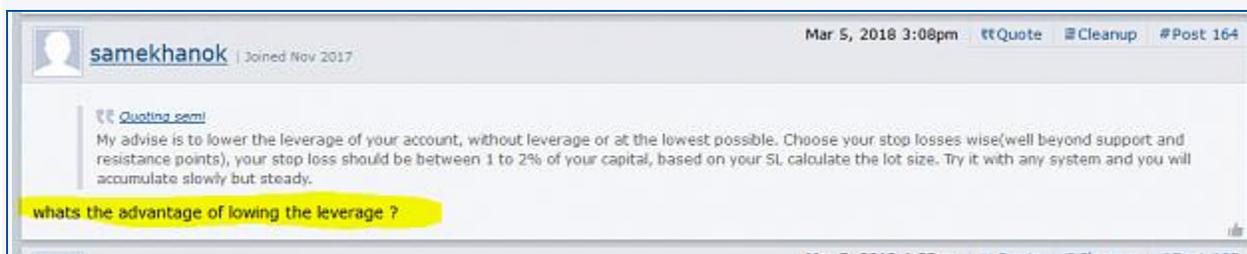

Interesting person I removed from this thread started a thread asking help because he lost 4k in 1 week back before posting here then out of curiosity I read some of his posts...and ?

Some people should not repeat should not trade at all!

A person who does not even understand leverage should not trade at all! It actually pisses me off that these guys lie themselves on my thread then I spend energy analyzing their posts and concluding they should not be here wasting my time.I strongly detest lairs.

Note to everyone you will be removed for not having experience and that means more then clicking buy or sell!**Respect this thread or you will be removed!**

[Quoting bojack34](#)

Hi Davit, I was wondering if you had time to give me some advice on one of my post from about 2 weeks ago. I asked you a question in post# 18,595 about my post #18,527. You replied to me in post #18,596 and you replied, "I'll get back to you later just not in the right frame of mine drinking now and little pissed off" If/when you have time, if you don't mind can you possibly give me your advice whether or not this is a viable way of setting my pending orders? I'm sure that there are probably many different ways to do this as long as we are breaking...

Hi Bojack

From my own experience in the past I tried to cap my trades to max 5dollar a pip on 5k account that is all positions combined max 5dollars.

At 10k I increased it to 8dollars max and stayed long time at this.Question is hard to answer because each persons tolerance for risk is different based on experience.I tend to be conservative trader which explains why I don't like hyper pairs like GJ Still now I trade mini lots...still hit over 10% a month...

You have to experiment what you are comfortable risking.There is no hard answers books recommend 1-2% risk...I risk more then that and don't feel pressured.Only you know the answer.Be honest to yourself.If lacking experience and you don't have self discipline then don't risk too much until you overcome these typical trading behaviors.Worst thing you can do is copy someone else trading risk tolerance and blow your account because you don't have that persons experience.Everyone is different. I can tell right away Snail is on different level and to copy him may be a mistake.Run at your own pace.

Good luck

If you personalize losses, you can't trade-Bruce Kovner

Ok, thanks Davit. I was going to only risk 2% and break it down how I pictured in my post. I will forward test this method and see if it works and if not I will pivot to other possibilities. Thanks for your reply!

don't over think it.Forward testing is over exaggerated. With same set ups I can make money and you can lose money difference is subjective. We trade ourselves.Work on yourself.Market is neutral. When Mark Douglas says every moment is unique in the market is true.There are patterns that repeat however there are also factors that are unique every day like news etc. There is great deal of randomness however there is also order within chaos like pivots...

Don't want to get too deep but testing historical data for future projections for most part are flawed...

Still holding UJ from last week. Last week {image} Current PA {image} Davit, I would really appreciate if you could compare my pivots with yours and let me know if I'm way off. My pivots were way off this morning on EURAUD. Best regards

you are 8pips off which is acceptable.

mine is WP 110.527 almost 110.53 lets say 7pips off.I am not sure if mine are correct either.I checked many websites and Fib weekly is 110.34

<https://www.investing.com/technical/...ints-fibonacci>

Oanda moved to GMT+2 and I suspect I am off myself

nice gain and this could drop lot more tomorrow

You may see my last chart (UJ) and think why the pivots are off with respect to the one I posted before (UJ). As I already asked Davit about my pivots being plotted off and he suggested me

<https://www.investing.com/technical/...ints-fibonacci>

My broker is [Pepperstone](#) (GMT+2). So I tried to be as close to pivots from above website using Davits Pivot Indicator and this is what I did.

UJ Pivot on Website is 110.34

Attached Image (click to enlarge)

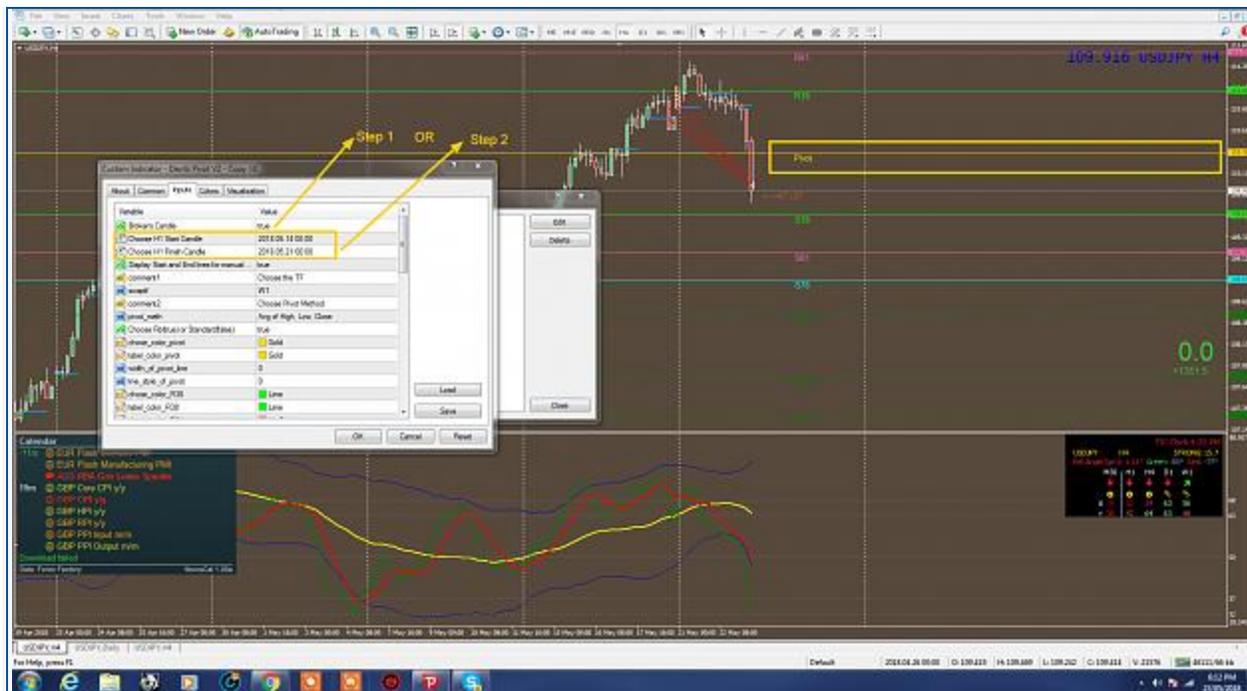

The screenshot shows a website interface with a navigation menu at the top containing 'Forex', 'Indices', 'Stocks', 'Futures', and 'Commodities'. Below this is a sub-menu with 'Classic', 'Fibonacci', 'Camarilla', 'Woodie's', and 'DeMark's'. A 'Timeframe' dropdown menu is set to 'Weekly'. The main content is a table of pivot points for various currency pairs.

Name	S3	S2	S1	Pivot Points	R1	R2	R3
EUR/USD	1.1592	1.1688	1.1747	1.1842	1.1937	1.1996	1.2092
USD/JPY	108.46	109.18	109.62	110.34	111.06	111.50	112.22
GBP/USD	1.3353	1.3414	1.3451	1.3512	1.3573	1.3610	1.3671
USD/CHF	0.9898	0.9934	0.9955	0.9991	1.0027	1.0048	1.0084
USD/CAD	1.2673	1.2741	1.2784	1.2852	1.2920	1.2963	1.3031
EUR/JPY	128.54	129.27	129.72	130.45	131.18	131.63	132.36
AUD/USD	0.7390	0.7436	0.7464	0.7510	0.7556	0.7584	0.7630
NZD/USD	0.6788	0.6836	0.6865	0.6913	0.6961	0.6990	0.7038
EUR/GBP	0.8642	0.8687	0.8716	0.8761	0.8806	0.8835	0.8880

I used step 1 shown below on my Davit Pivot Indicator (Setting Broker Candle= True)

Attached Image (click to enlarge)

I've also seen If I use Step 2, It will bring the Pivot to the one above website shows.

I believe this will work for me (I'll use Step 1).

Disliked

I suggest you start your own thread and do as you like.

no offense but its somewhat insulting me that you actually think I have not thought about all these variables.

You are removed from here.

I have removed guys who wanted to add MA's Bollinger Bands,Volume! (hate the most) this oscillator that oscillator etc.

Point is to everyone master what is laid out here 1st when you do then you may want to change things privately on your own trading but master it 1st!

There are literally hunders of systems here at FF where 1st page is 180degree different then page 80 and 360degree at page 150 and then nobody knows what is going on.

One trader here at FF posts literally different template on each posting and he has a thread....in systems and one can't tell what exactly this guy believes or trades because each posting is different indicators and template.

If you are not happy being here please join other threads by all means and **stop wasting my time.**

Looks like mostly sore losers coming here and again demanding I and others show full disclosure.

These are our accounts and not theirs!If you and I choose to share whatever then its in free public forum and nobody has a right to ask for more.

I dislike TE because it effects my trading negatively.I operate best when my positions are private and details of my account private. If you don't like this approach then you should not be here or make demands.FIY best traders here don't have TE either Scott, CNtrader ,MrPip to name some.

This is pivots and this is how I trade. If it does not fit your criteria please by all means exit door is open!

Davit sir you are my Fav 🥰🥰🥰 In an other account i just deposit 4\$ from starting into icmarkets and then deposit 23\$ again and my account is 100%+ in this week from 0.01 lots,. Davit really i must try to follow your Trading Rules, and and watched Mark Douglas recommend vides. 🍺🍺🙏👍👍💰 {image}

wish you continued success.Keep in mind its easier to build smaller account then larger.Mostly has to do with risk.Most people don't feel bad blowing 100 account hence risk more but 10k account is lot more painful to blow hence requires more realistic risk management. What this means its not simply "I am going to do the same with \$ 100 account as in 10k account." It does not work.You must compensate risk.

cheers 👍💰

Hi guys

Its important not to scared yourself and end up making wrong decisions.I have traded long enough time to experience many instances when Euro looked hopeless (Greece debt crises, riots, Ukrainian revolution and Russian interference etc) and Euro did the unexpected and gained.

Watching Mark Douglas videos should reminds you who moves price and that's dynamic traders,market makers.

Yes everything looks more bear actio0n however don't be surprised opposite happening.

My Overview outlook is USD will weaken significantly right after June 13th Fed hike which is pretty much priced in.Keep this trajectory in mind.

If you must cut losses on selling USD do it partially 25% and wait for just 13th.

My style of trading has been if you are not sure on USD focus on **none USD pairs**.Plenty of action there.I often find commodity pairs best predictable AUD NZD CAD against each-other.Once again its not about how many pairs but quality of the trades.You can make 1-5 badges of trades in a week and make decent return.

{quote} No offense, but why so bearish on the USD? Especially when they are one of the fastest growing developed economy and the quickest to raise interest rate + reduce balance sheet... Twin deficit?

USD is priced in probably 90% already.USD got sold off hard right after last rate increase.No reason to suspect its not the case this time again.

Everything has a price yes even the good news has limits.

When you have traded long enough time you most certainly experienced this.Market discounts almost everything before the fact then usually opposite happens.

Positions are dumped,profits taken which has a rubber band reaction.

I requested Twee to move my thread to system forum
I don't like too much attention here.It was a mistake for me to open here and I apologize.

Edit just to clarify
"mistake part" I was referring to interactive forum.I should of opened in system thread.I don't regret helping hundreds of people make money at FF and continue to do so.I prefer low key profile.Interactive gets too much traffic and with it too much unwanted attention and not necessarily good kind.

Cheers

hi mister davit and seniors Im not receive answer for me other question. maybe was stupid question? Im have other question now because Im am in euraud from last weak buy. but with new weak pivots change and Im not know how to do now. Im must wait for price go more down to hit level S61 for me to add more buy or Im must close trade with loss? {image}

I can't manage your trades.I don't know the future.Whenever you trade take position you must be able to manage your trades.
Can price bounce up from now? Yes but it can fall further down as well.

You probably skipped the part that this system requires experience!
and you look like just started trading.

{quote} Hello MrAussieFX, I read this post and others, this AM (PST) before I left for work and continued to check in throughout the work day to make sense of the replies, Etc. I have to agree with you 100%. I Joined FF in search of "Like minded" people wanting to aspire to trade for a living. I have narrowed my search to Follow this thread and honest people with integrity that have a good understanding of Davit' s style of guiding this forum. I have past experience trading commodities, (paid\$\$\$) educating myself in Candle sticks, oscillators,Indicators,...

Hi Axleman

I just like to thank you for your detailed personal post.Sometimes I have no idea people like you silently following and then post like you have.

Thank you for your support and don't be shy posting your trades.

I tried many things and eventually crossed off crap that never worked.In simple terms forex is rigged system where market makers can push price to make their profits and retail traders are just providing liquidity and nothing more.Question I pondered years go how to beat stop loss and how to profit from something that is random and systematic same time.Well results is this system.Its a distilled ideas drawn from many sources from Jesse Livermore to Dirk Du Toit,Mark Douglas and many others like Richard Donchian....Father of break out trading. Anyway welcome and thank you

Hello all pivoters! fresh positions under construction for this week {image} {image} {image} {image} {image} {image} {image} {image} Davit, referring to those who shit on this thread, is a very healthy proverb "dogs bark in vain, the bear goes forward" 🍷👍

Hi Catalin welcome back!

Only suggestion I have try not trading hyper pairs like GJ GN. Volatility is two edge sword. regards and good going you got lots of great trades 🍷👍

{quote} Well said. I have been learning from this thread since late 2016 my first post was Feb 17, 2017. This is my only thread, Davit is my only Buddie and this is the last and only method I trade with. Needless to say, I am very protective of this method and thread. I would be right there with all the rest who would stop at nothing to keep this thread alive and EXACTLY the way Davit wants it. If you have not seen my posts...I had to take time off after the death of my mother. It was extremely painful but once psychologically able first thing I...

Thank you my friend and wish you big success! 🍷👍💰

hi well do follow very closely every day all everyone performs and learn from it but the rules say only show trade with the template from the master but some do show others template or very very confusing or are they smarter? anywhere thanks for the system.

Hi Some traders have different color background and Brian in particular had confusing charts and he no longer posts here and he has his own thread.

My question to you why you concern yourself with others instead of your own charts.

If things are too confusing perhaps you should not be here ! and maybe you lack experience which I stated as requirement to trade on this thread.

added more positions on AJ looking 84 as TP
added more positions on NJ as well

Adding more shorts on UC is valid in my view. This could drop to 1.26 after June 13 rate
Market basically has priced in the rate and don't be surprised USD getting dumped right
after. Sell the fact applies

{quote} Hi Davit / 1pipperhour / snail69 /MrAussieFX Firstly thank you Davit for the incredible work & generosity in sharing the system & support for all the comments. Been spending a lot of time following the thread & going through all the posts (on 640/960+) and trading it on a small account. I would like to understand a bit more regarding money management, as I think it is as critical to the success of the system, as is the technical side. With following all the Money Management principles on Page 1, and observing trades posted on the forum,...

My simplest answer to you is let your winners be bigger then your losers.Seems obvious but I do pay attention to average trade win and average loss

Take a look at my account stat this month I posted (page back) and look at those figures. Don't be overly concern about ratios just try to have your winners bigger even if slightly larger.Since we trade lot more positions even slightly larger winners compound if you had taken example 400 trades in a month.
cheers

Just want to say this was tough month to trade with USD hammering everything and with all hectic PA still hit my number and more. **Yes took a loss on EU** but that's part of the game.

My critics accuse me seating on DD and not taking a loss. Not the case did close EU in red among many minor ones. I find it comical that these guys underestimate my trading abilities including money management. You may get lucky one month two even three but not 2yrs straight!

{quote} Thanks for your response.

Pivot Points.

The mathematical calculation of various support and resistance levels.

Based on the high, the low and the closing prices of the previous period.

PP VALUES WILL BE DIFFERENT ACROSS BROKERS.

Calculation:

Daily PPs are usually calculated based on the New York closing time, i.e. 16.00 EST (22.00 CEST).

Fibonacci PPs: Fibonacci Pivot Points are an extension of the standard PPs where Fibonacci multiples of the high-low differential are considered to form various support (S) and resistance (R) levels. You can calculate the Fibonacci PPs in the following way:

- Pivot Point (PP) = (High + Low + Close)/3
- Support 1 (S1) = P - {.382 * (High - Low)}
- Support 2 (S2) = P - {.618 * (High - Low)}
- Support 3 (S3) = P - {1 * (High - Low)}
- Resistance 1 (R1) = P + {.382 * (High - Low)}
- Resistance 2 (R2) = P + {.618 * (High - Low)}
- Resistance 3 (R3) = P + {1 * (High - Low)}

Concluding Remarks

Contrary to the popular perception, pivot points don't only calculate various support and resistance levels, but also offer some valuable trading strategies.

This morning I posted CJ as good for rebound reload trade going north. and It paid off. Holding this higher.

Its interesting that I made lots of money selling the Yen in crosses in May. AJ NJ CJ EJ over and over

I talked about this many times that once you get out of a trade. Wait for dip or spike then reload going towards WP and then could go higher or lower to 61-100

Its being aware of the movements. Basically I hit a pair over and over until not much left then move on to another. This is actually smarter way to trade because you are already familiar with

File 25 - Davit's Posts on his Pivot Trading thread-2018-05 Pages - 112

the pair because you just closed a winning batch and know its movements intuitively. This is why I am not in favor of being all over the board. Find small number of pairs that work for you and milk it.

Going with the theme above. Should AJ drop to 61S I most likely reload another batch north. Don't be afraid of dips or rallies. It's necessary to create opportunistic set ups. As you can see AJ has great distance going north. Potential is there

This is advance trading what I am sharing is truly valuable and saying this without slight ego boast. It's not about weak or strong currencies (currency meters)

its about what each is doing and where! **Location and PA**

Don't get deceived by flashy indicators! It creates false sense of security.

NJ very likely to drop 38s

Why I think this? Because NU is "due" to correct lower which has domino effect on crosses.

When you mark key areas on your chart you basically creating trading plan and it takes life on its own. Becomes organic meaning you may end up trading just Yen crosses all month because you

File 25 - Davit's Posts on his Pivot Trading thread-2018-05 Pages - 112

got in the "zone"

One swing leading to another then another then you are in natural rhythm

This is how I see Snail69 trades he zeros in what he is focused on.I mentioned AJ long to him he said no not on his pair list.I respect that.He knows what he is focused on.
