

Apr 19, 2017 - pg 451

dove_alliance :

OK OliveBranch here is your trading plan with my notes attached and highlighted in yellow.

Date: Eur/Jpy 1000 Sydney Time
CHECK NEWS RELEASE BEFORE TRADING Yes
- if No..... STOPdo not proceed with Plan

Daily:

ROMAR - Resistance

EMA - Resistance

PSAR - Resistance

Check List:

Last MACD 0 crossing Down

Last EMA Alert Arrow Down

Last DB Attachment 114.840

Fibo up or down Up

Notes: Full Down Trend. SAR close to & below EMA = 23.6 Fibo

My Notes White crossing Purple with Opening at EMA resistance. Smooth holding support. SAR attached on top at 116.593 with the Parabolic roughly 75 pips as resistance. Green Arrow for entry long.

2 HR:

OPEN PRICE - 116.343

ROMAR - Resistance

EMA - Support

PSAR - Support

Check List:

Last MACD 0 crossing Up

Last EMA Alert Arrow Up

Last DB Attachment 116.478 Magenta box. DB Currently on 116.485

Fibo up or down Down

Notes: Consolidated ROMAR Down Trend. EMA Very close to ROMAR probably crossing next candle, 4 Horsemen aligned for the up. DB attached with SAR.

My Notes: ROMAR at EMA crossing for an uptrend. Parabolic and EMA strong for the uptrend with the Parabolic as support. DB/SAR attached on top at 116.593 with no Green divergence.

1 HR:

ROMAR - Support

EMA - Support

PSAR - Support

Check List:

Last MACD 0 crossing Up

Last EMA Alert Arrow Up

Last DB Attachment N/A on 1hr charts

Fibo up or down Down

Notes: Full Up Trend. MACD just crossed on current candle. Purple sliding over top of white.

My Notes: ROMAR support for the uptrend with the market ranging between 35 and 40 pips with the Parabolic holding as support.

Market News For EUR/JPY/USA. USA in 14 hrs

Final Notes: Consolidation. Daily Full Down trend. Daily open at EMA. H2 EMA about to cross H2 ROMAR when it does it will be support = full up trend on the H2 & probably the H1.

My Final Notes: With the new Daily Opening at EMA and the SAR attached I would be looking for the SAR retracement on the low side above Purple after hitting the Daily Parabolic. With the DB and divergence attached on the '0' Fibo indicating a new Daily uptrend. The H2 is just above the ROMAR support. The H1 is ranging and be looking for a hit on the H1 Parabolic H2 EMA for an entry long.

Entry: Long on confirmed crossing of H2 ROMAR & EMA & H1 full up trend confluence - target possibly Daily PSAR.

Your Reason for Entry: My reasonings are:- PT with H2 candle on Smooth Support & with EMA crossing ROMAR to both be support, H2 MACD & EMA arows up, H1 MACD & EMA down, H2 DB attached with Magenta box with also a SAR, plus for confluence the H1 hit on PSAR & H1 ROMAR & EMA also Support. Both the H1 & H2 are in sync Full Up Trend with both charts having the 4 horsemen for the up - but noticeably the H2 & H1 charts are opposite to the Daily which is a Full Down Trend and a SAR attached at the EMA. The Daily currently has an Up arrow on the MACD. In regards to the Daily is at EMA Resistance = roughly H2 ROMAR and open daily candle under EMA. However due to the sync of the H2 & H1 it seems reasonable from my point of view that the Daily EMA will not hold it's resistance because all of the above and particularly the H2 ROMAR cross of EMA. Maybe i should be waiting until the close of the current candle for the H2 ROMAR/EMA cross. I'm thinking my entry is in the moment in the latter regard & not just being trigger happy.

Not being critical OliveBranch but I would say your reasoning for entry is pretty much far left. Strictly analytical I would say but the trend is up and you pulled the trigger in the right direction. You need to gather a mindset that is simple in regards to the trend and being objective with the trend. The objectivity is support and resistance nothing more; nothing less. Keeping your trading plan simple surrounding support and resistance will help your mindset focus on the trend with confidence; instead of hoping, guessing, and a maybe.

[illegible]

dove alliance :

+++++

I believe you are speaking to the 2h ROMAR crossing the EMA on Tuesday, changing/reversing the trend. This also follows the 1H ROMAR crossing of the EMA on the 17th. So they are now insync, no longer in conflict. Also we are now alerted to the Daily with MKT moving steadily up toward ROMAR and a very likely EMA crossing; and with it a full blown new up trend insync on all three charts.

[illegible]

Apr 21, 2017

Hendo

Last nights trade plan. I probably should have waited a little longer before entering, and I let this go through high impact news only because of my faith in the system.

Session Sydney: EUR - JPY 4/20/2017

Daily: Open 63 pips from EMA.

ROMAR: Resistance

EMA: Resistance

Parabolic: Support

Notes: Purple crossed White and Smooth up. SAR attach to previous candle. Trend EMA arrow up. MACD zero cross arrow up. PSAR flipped for the up. FIBO up.

H2

ROMAR: Resistance

EMA: Resistance

Parabolic: Resistance

Notes: Purple crossed White, Smooth, down. EMA crossed Purple for the down. Trend EMA arrow down. MACD zero cross arrow down. DB up, / SAR / MAGENTA / GREEN / DIVERGENCE attach. SAR attach below previous PSAR. PSAR flipped for the down. FIBO down.

H1

ROMAR: Support

EMA: Resistance

Parabolic: Resistance

Notes: Four Horsemen down, Purple in slider with White. Trend EMA arrow down. MACD zero cross arrow down. FIBO down.

FINAL NOTES: H1 down. H2 down. Daily down however, turning up. Market in consolidation. Daily open 63 pips from EMA. I expect Daily to retrace down to EMA allowing room for + 40 for H2 short after EMA crosses Purple with SAR flip for the down.

Adjustment:

Short: Entered short position off H2 EMA crossing of Purple for the down. Referenced H1 retrace up to Smooth for entry. Set TP +40 SL 40.

Result: Took + 40 from the market.

Edit: Daily PSAR flipped for support when I adjusted my plan after new Daily candle opened.

+++++

pg 453

dove_alliance :

SCENARIOS FOR SUPPORT AND RESISTANCE ON THE H2 ONLY

Scenarios for ROMAR:

ROMAR below EMA and Purple gives ROMAR the power for an uptrend. ROMAR above EMA and Purple gives ROMAR the power for a downtrend. EMA is the sub-power working with ROMAR on both uptrend and downtrend.

ROMAR crossing Purple changes ROMAR in being both support and resistance until ROMAR crosses EMA in changing the trend; or sliding under EMA for a continuance of the original trend.

The market hitting ROMAR **under** Purple in an uptrend and closes below ROMAR. The Market will return back above ROMAR on the next bar and sliding **under** Purple

The market hitting ROMAR above Purple in a downtrend and closes **above** ROMAR. The Market will return back below ROMAR on the next bar and sliding **above** Purple.

ROMAR going through CENTER (in and out of Purple) you are in a ranging mode. The SAR will show the ranging levels.

Scenarios for EMA:

ROMAR crossing EMA changes the trend and remains in the ROMAR trend until the next crossing.

All sliders with EMA is associated with Purple and/or the Parabolic keeping the trend in-tacked.

EMA is also associated with the 4 Horsemen in regards to either a slider (and/or) a change of swings. Changing a swing is with EMA crossing Purple.

Until EMA crosses Purple; EMA remains in the original swing (do not anticipate).

The Parabolic is one of the best weapons with the Paradox as for recognizing support and resistance in swings. 90% of the Parabolic flip is with EMA crossing Purple in changing the swing. The other 10% is in the ranging mode.

In trend the Parabolic can move the trend for 100 or more pips. Catching a Parabolic flip on the H2 is one of the best entries that can be made; or a hit on the Parabolic for an entry back into trend.

1. ROMAR crossing EMA.
2. A hit on ROMAR with a slider of EMA or Purple.

1. EMA crossing Purple.
2. A hit on the EMA trend.

1. Parabolic flip
2. Parabolic hit.

Creating a trading plan is about seeing every opportunity for an entry. All you are looking for is a 40 pip entry even if the entry is off support or resistance of one or more from the descriptions above.

[illegible]

Hendo

Here is this evenings trade plan. I also included the Daily screen shot along with the H2 for review. Hope this helps! I missed my planned entry by about 7 pips, and paid it no mind, as it is a very strong up trend!

Chad

Daily: Open 372 pips from previous close. 162 pips above ROMAR.

Notes: Purple crossed White, Smooth, and EMA up. EMA crossed Purple for the up. DB up with MAGENTA DIVERGENCE attached. PSAR flipped for the up. FIBO up.

Parabolic: Support

Notes: Four Horsemen steep up. DB up, with SAR attach and MAGENTA DIVERGENCE attach at 0.00 FIBO. Trend EMA arrow up. MACD zero cross arrow up. FIBO down.

Parabolic: Support

Notes: Four Horsemen steep up. Trend EMA arrow up. MA cross over arrow up. MACD zero cross arrow up. FIBO down.

FINAL NOTES: H1, H2, and Daily in sync with up trend. Will enter long position off H2 support. I will make long entry off H2 Purple, and Daily ROMAR confluence.

Adjustment:

Long: Entered long position off H2 Purple at 38.2 FIBO and Daily ROMAR. Set TP +40 SL 40.

Result: Took + 40 pips from the market.

Apr 29, 2017 – pg 459

dove_alliance :

You have a Green Arrow for an uptrend. Five hours later you have the MACD Arrow.

What is the Rule with both Arrows?

What I am going to do is give a few scenarios with both Arrows; The EMA trend arrows and the MACD zero crossing arrows and the Rules that are to be applied.

First arrow snippet is the RED followed with the MACD. This is a down swing showing below with the Red arrow followed by the MACD arrow going into a EMA slider.

You already know this is a slider with EMA not at Purple with White and Smooth showing a crossing on the next Bar. ROMAR is up with the Parabolic and also EMA as support. Going short is a total risk of losing your trade. The objective is being patient and wait for the right indicator for entry going North which would be the Green Arrow alert.

The Alert for the EMA crossing had sounded off and entry on the slider going North is the objective. The Green Arrow is before the MACD crossing Zero.

On this snippet you see the MACD Arrow showing up. This is letting you know the trend will continue. If you missed the EMA arrow you then have an opportunity for a second entry with an H2 full blown trend.

Now notice on top you had the MACD showing up before the RED down arrow. In this scenario with the MACD arrow first is telling you the rule is: NO ENTRY. And also take notice EMA is in a slider with ROMAR in an uptrend. Again patience and waiting for the next Green Arrow.

On this Snippet below you got another Green Arrow going North off the EMA slider. Take note on the right price bar you have 60+ pips to the Parabolic with Entry at EMA.

In this snippet is showing you was caught in a ranging mode. But with a 60+ resistance you got out with your 40.

Let's do one more:

On this snippet you have approximately 20+ increments on the Price Bar with EMA, the Parabolic's, and ROMAR in an uptrend. On the left side you see a Red down arrow and the next bar the MACD against the trend (no entry against the trend). The following bar is your entry with the EMA Green Arrow showing the way into the trend. Five hours later you have the MACD crossing '0' in case you missed the EMA entry.

I never recommend counter trading unless you get to the point of knowing the rules precisely.

So let's move to the top and you have the RED Arrow at EMA for a counter trade with the MACD on the next bar. Let me warn you at this point. DO NOT EVER ANTICIPATE. You wait to see if you have a signal for a slider or a reversal.

As the Market moves forward you get the signal. You have EMA at Purple with the White crossing Smooth and the Parabolic flip. The question remains? How many pips to support which is ROMAR? With opening candle you have 40+ pips for the short. Your question would be do I take the risk? What I would be thinking is on Purple. For one thing the bar is out of balance for a retrace to Purple. If I could get higher for an entry it would give me the room for the spread plus 40.

Being Patient for the retrace entry is made with the Purple hit for 40..

+++++

I'm going to add an extra with the SAR. For some reason most of you are having problems with the Rules in regard with the SAR. So let me go through a scenario with the market ranging.

In a ranging mode; usually the high and low ranging marks are 60 pips. And in order to place a 40 pip profit you always trade with the ROMAR trend. In this scenario below you have ROMAR as resistance. In ranging you are also in consolidation with the Parabolic, EMA, and the MACD Arrows flip-flopping.

The RULE is: ONE TRADE PER DAY. Greed will eventually destroy you. Always remember that.

On this screen shot below you see the ranging with the SAR. You have the BB's flat lined and ranging between the bands. Eventually you get the market hitting ROMAR resistance. The RULE for ranging is from resistance to the bottom or from support to the top. In this scenario it s from resistance to the bottom. What most of you are missing is the hit on ROMAR. If the market gets above resistance it will return back below. If the market gets below support it will return back above.

The last hit got above ROMAR, and closed above ROMAR with Parabolic as support and this is telling you - the market will return back below ROMAR.

And here is the proof with the breakout. If you missed the breakout you still have an entry with the open below Smooth. With the EMA Arrow and the next bar at Smooth with the MACD.

After the breakout you are back in the ranging mode with ROMAR as resistance. The RULE for the SAR IN TREND is take profit on the first connection and wait for the re-connection at resistance/support (depending on the ROMAR trend) which is the Parabolic. In consolidation you can trade both ways.

I want everyone to take great notice on each chart above in showing the moment with each scenario. All entries are in the moment in what the Paradox is saying. Study every scenario in how it is done in the moment. Study how the rules are being applied in the moment. For those who keep saying they are studying over and over again - guess what? You still have a lot of studying to do.

[illegible]

May 8, 2017 – pg 462

shinny:

Hello Traders

As Dana already stated, there has been a number of opportunities today. You could have traded short from the Upper BB, Long from the 2hr EMA/PSAR or Long from Daily Smooth (as I did). Each one of those trades is within the rules of the system.

Here is a 2hr screenshot. The first 2 arrows are entries at the open of that bar, the last one is the one I took. I waited for a positive bar from Daily Smooth, with the DB and Divergence attached:

I was slightly late with my entry as I was busy with something else, but I still managed to get +40.

When you do your plans, remember that there is a reason for doing the Daily 1st. Trading with the Daily is the easiest way to make 40 pips per day. You have basically had since the 18th of April, after Market closed above Daily Smooth to attack the trend long, with the occasional pullback for a short back into support.

I can see that a lot of you are getting it or are very close to doing so, so remember that in trading in general, and in The Paradox in particular, there is a very thin line between success and failure. But the good thing is its very black and white - we either are profitable or we arent. So we are under no illusions about what we need to do to improve.

Anything in life worth doing is worth persisting with. You have to learn to shake of the knocks trading throws at you and keep on going. Thats why they say that successful traders are only 5% - because you need to have a thick skin and be resilient to succeed.

I'm willing you on to do it, as Dana obviously is too.

[illegible]

May 9, 2017 – pg 463

Hendo

Hello Traders,

I spent the last week trading my secondary pair during all the bank holiday's. Looks like we have three different entries for the same trade. Here is my plan, pretty much laying out my motivation as well as entry point. I hope you will all benefit from it.

I'm sure by this point anyone can see how powerful this system is. Take the time to learn it and you will be very successful traders.

Session Sydney: EUR - JPY 5/8/2017

Daily: Open at White.

ROMAR: Support

EMA: Support

Parabolic: Support

Notes: Four Horsemen up. DB, up with MAGENTA DIVERGENCE attach at 0.00 FIBO with RED price tag.

Trend EMA arrow up. MACD zero cross arrow up. FIBO down.

H2

ROMAR: Support

EMA: Resistance

Parabolic: Eliminated

Notes: Purple crossed White, Smooth up. EMA holding resistance. DB, SAR, down with BLUE DIVERGENCE attach with SAR price tag. SAR attach above PSAR and 38.2 FIBO. MACD zero cross arrow down. Trend EMA arrow up. FIBO down.

H1

ROMAR: Support

EMA: Support

Parabolic: Support

Notes: Four Horsemen up. Trend EMA arrow up. MACD zero cross arrow up. FIBO down.

FINAL NOTES: H1 up. H2 turning up. Daily up. When H2 EMA crosses Purple all three charts will be in sync with up trend. H2 open candle, SAR hit, above PSAR and 38.2 FIBO. I expect H2 SAR to continue up, then turn DB. Will enter long position after H2 EMA crosses Purple with PSAR flip. I will be patient and wait for retrace, or open candle at Purple.

Adjustment:

Long: Entered long position off H2 support, open candle at Purple with EMA, Purple cross and PSAR flip. Set TP +40 SL 40.

Result: Took + 40 pips from the market.

As soon as I saw the LH come in with the DB I also realised that we were going to have an inside the box flip of the fibo back up. The DB on top (LH) was attached at the 23.6% and the support (ROMAR/Lower BB) was at the 61.8%.

[illegible]

- 1) An outside the box (Lower Low/Higher High) or
- 2) An inside the box (Lower High/Higher Low) at the 61.8% or 23.6%

Somebody took a short trade, but I don't think they knew exactly why they did, but it was the right trade in the circumstances. This system is totally out of the box in many ways, and there are many little aspects that make it very powerful.

When you do your plans, look at the whole picture, because if you do you will be able to know what is going to happen before it does. This scenario is one of many within the Paradox, and it worked out perfectly.

[illegible]

dove_alliance :

I'm going to spend some of my free time and try to help those that are having some major problems.

To begin with most of you are trading from the past and bringing your baggage into the Paradox. As I have stated many times. The Paradox is not a standard system. It is totally and completely outside the box in what you know about trading. It is a system that is complete with everything beyond what you have known about trading. The Paradox is a one system; WITHIN ALL systems and it is not an overnight learning process.

The reason why the Paradox is not for everyone is because it takes a lot of heart in learning. And most traders are looking to get rich quickly and just don't have that kind of heart. So they become frustrated and move on looking for something else. In reality the Paradox is a mathematical Matrix filled with an attitude of something within; or from which something else originates, develops, or takes form an atmosphere of understanding. Once you have gain that understanding is when wisdom becomes a factor.

It is a lot easier to train someone that has not ever been exposed to trading because they have no baggage. This means their mind is open to learn. It is like a college education with no baggage in learning and reaching their goal for a degree they know nothing about. This is why traders have so many problems in learning because they have been exposed with everything that is filtered from a garbage pit of other traders that knows nothing about trading.

Trading is not about what you know it is about the moment of pulling the trigger. And that is what the Paradox is all about the moment. A precise trading plan takes you into the moment. A trading plan lets you see into the moment of pulling the trigger. The Paradox is not a mystery but rather becomes a part of you; if only you shed the baggage of the past. The Paradox is seeing into the future and not of the past.

Every indicator in the Paradox are precision to work with one another as a whole unit. Every scenario and variable you can even think of is built within the Paradox. And that in itself is mystical. To have a system that can be used to trade every single variable that is imaginable is beyond belief. But in reality it is true.

When you try to out think the Paradox is when you become a loser; that is part of the baggage. The Paradox has its own mind and is speaking to you. All you need to do is listen in what the Paradox is saying. And everything you need to know in how to listen is on this thread. It all begins with learning how to trade in the moment.

This last week we were in a very heavy ranging mode and the reason is because the Daily bars had finally reached its top on the uptrend. What is happening now with the Daily is setting up for a consolidation and/or a reversal. And the reasoning is because Friday's Daily bar had closed below Smooth. With the G20 meeting over this weekend will tell the story opening on Sunday.

With this screenshot below you can see the ranging between high and low with the SAR and DB attaching together for the reversal on the ranging. My question is: How many have taken the time to study the SAR and DB?

They are both significant in trading. They both revolutionize the cycles of all entries; either short or long. How many times have you watch the attachment of either the SAR or the DB or even both on the same bar and sit there to watch the trade run away from you? All this week the ranging highs and lows were during the session most of you trade. Not once this week have I seen a posting, nor a trade relating with the SAR/DB attachments. And that tells me a lot about the learning process of everyone.

So look a at this chart below and see the entry for every day of this week with the SAR and DB together in the ranging mode. Each entry without risk and 40+. Instead of sitting at your monitor(s) and watch these trades run away from you; then why not take a risk of pulling the trigger and see what happens. Each high was resistance; each low was support. This means you will not lose a trade with 40 SL.

In swings and trends the SAR is your best friend for entries. All you need to do is study the charts in how the SAR works; and you would be surprise just how easy the SAR will do all the work for you.

All you need to do is keep track of where the last DB is attached and the last SAR is attached on your trading plan. Then you will know where the next attachment is going to be. If the DB and SAR is attached on top then you know the next attachment is on the bottom; and vice-versa.

Here is the scenario for ranging:

You have both the DB and SAR attached on the top. The next SAR will be on the bottom, The next DB will also be on the bottom. The SAR is short term and the DB is long term. This means the SAR will detached from the DB and make an attachment on the bottom. The market will continue south until the DB attaches for a reversal with the SAR for a lower low. Once they are both attached together then the market will turn and head back north.

Here is the scenario for trends:

You have both the DB/SAR attached on the bottom and in trend. You have the SAR detached from the DB and attaches on a bar going up in the trend. Profit is taken and you wait for the SAR reattached on a down candle at the uptrend Parabolic for reentry into the trend. This scenario is a great way getting back into a trend with sliders knowing both the SAR and DB has too met together on the top. Vice-versa on a downtrend,

Example of an uptrend.

Example of a downtrend.

Finishing the downtrend with the DB

Finishing the downtrend with the DB

[illegible]
