A question answered by Emmanuel7788:

Another PM question : " my web-based platform does not have the TDI, can I trade without the TDI? "

Yes, you can trade without the TDI like the OP had said several times. But you first need to master the trading the 5-Method and have very good trading knowledge and experience in trading with Price Action at Support&Resistance.

On your mobile platform, you can replicate the TDI using the RSI which is known as the Fozzy-RSI.

Here is link to an old post by a senior member Dimi.A on how to replicate the TDI on your mobile. This approach can also be used on any other trading platform without the custom indicator Traders_Dynamic_Index.

Hey TMS traders,

Hope everyone is well and making lots of progress with the TMS system.
Just dropping by to remind you all on how to include the full TDI indicator with Volatility Bands and Market Base Line on your mobile or tablet version of MT4 (or any other platform that doesn't have the TDI).

1. Insert an RSI with the colour set to your background colour or "None" if you have that option.
   Set the period to "13", Apply it to "Close".
2. Insert a Moving Average into the RSI's indicator window and set that period to "2", "Simple", apply it to "Previous Indicator's Data" and make that line Green.
3. Insert a Moving Average into the RSI's indicator window and set that period to "7", "Simple", apply it to "Previous Indicator's Data" and make that line Red.
4. Insert a Bollinger Band into the RSI's indicator window and set that to "34" with a deviation of "1", apply it to "First Indicator's Data" and set that line to Blue.
5. Inset a Moving Average again into the RSI's indicator window and set it to "34", "Simple", apply it to "First Indicator's Data" and set that line to Yellow.

And there you have it. The complete TDI for your mobile, tablet or any other platform.
Please see screenshots below and let me know if you have any issues!
