

QM

MASTER **Quasimodo**

Quasimodo Over and Under. By Mansor Sapari aka ShadowgunFX

May be useful ...

1. What are Quasimodo

2. BASIC Chart Pattern QM

3. Intermediate Chart Pattern QM

- QM TF Level Large (QML)
- QM TF Medium Level (QMM / MPL)

4. QM Shadow

5. Profit Target and Stop Loss

6. ADVANCE - Combined QM Level and Price Action

This is especially great !!!! Fakeout, Diamond, CPLQ, CP

7. Remembrance QM Master Compulsory reading sebelum melakukan Entry

8. Examples

1. What are Quasimodo (QM)

Quasimodo was taken from a cartoon character Hunchback of Notre-Dame by Victor Hugo

Note Left Shoulder Quasimodo higher than the right shoulder ... and if we make a line in the height of the left shoulder and right shoulder ... then this is not the same height.

The concept is that we will use in the setup QM

Or the story melayukita name this setup as "The Hunchback Of GuaHantu"

Where at the end of the story compilations be Hensem dan married Princess King ..

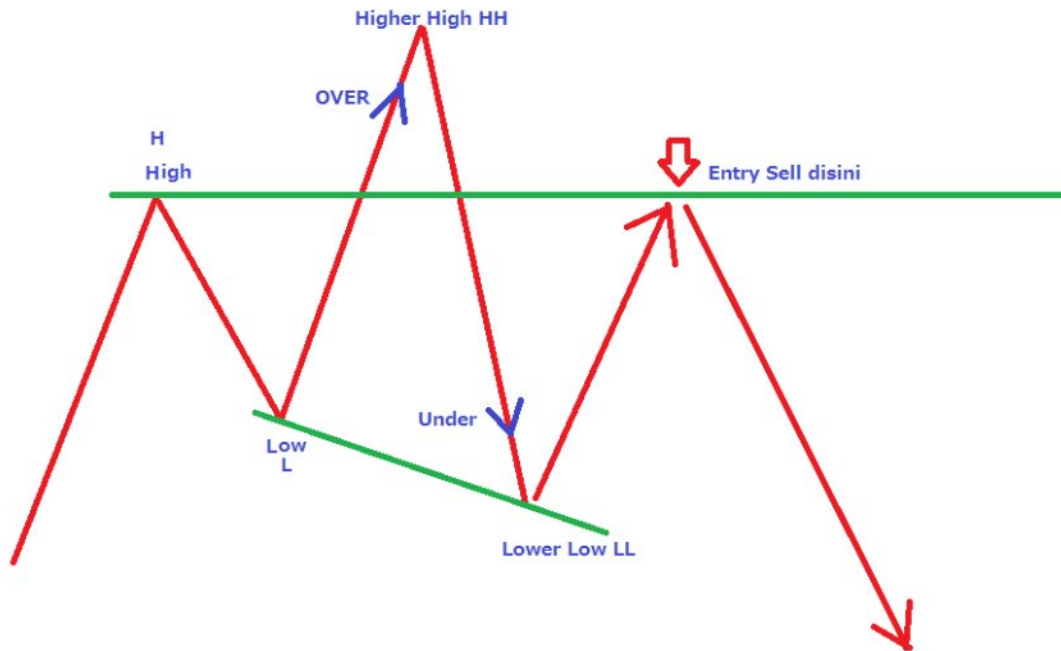

So with this forex MT4 chart ... we started with a rather bland and not handsome but with patience and determination ultimately we will be more handsome account ;-)

2. Chart Pattern Quasimodo BASIC / BASIC

As the picture above ... note the price movement.

1. Price naik dari NO 1 and down to make the Resistance in no 2 (bahukiri)
2. Then at No. 3 price down making L and rose again to break above resistance at No. 2 and made a Higher Quality at No 4
3. Then the price fell Break No. 3 and make Lower Low in no 5
4. The Price went back looking for no 6
5. Here we will create a Sell Position at No. 6 ...
6. No. 6 is usually the same level with the No 2 ..

Features Higher High price makes up (no 4 holiday no 2) and the Lower Low (5 no break no 3) is called Over and Under.

Over as price makes Higher High Bahukiri Break (No 2)

Under because membuat Lower Low price Leheratau Break No. 3.

Sell Opportunities entry at No. 6 in which No. 6 is adjacent to No. 2.

We see the example below of MT4

When conditions were pretty full and the price made it OVER and Under our standby for sell at No. 6 (the same line with the No 2)

Picture credit to Safwan Omar ...

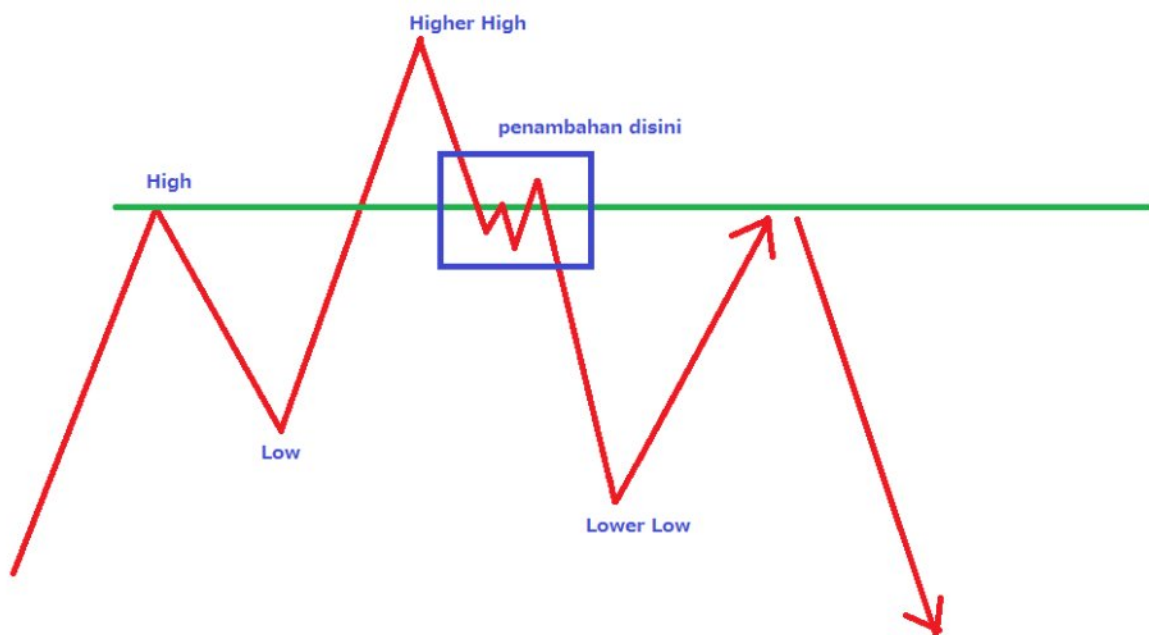

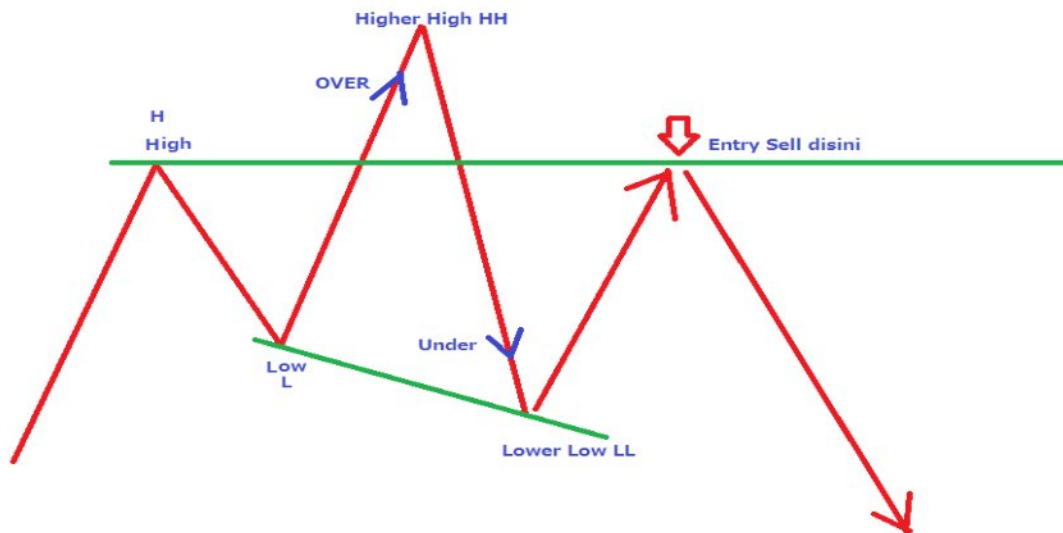

Ok..sekarang we've learned BASIC or BASIC pattern Quasimodo or any other name is Head And Shoulders Chart Pattern

But this is only BASIC or Basic.

This ebook will go over this Pattern mendalammengupas chart with more details.

3. Intermediate Quasimodo Chart Pattern

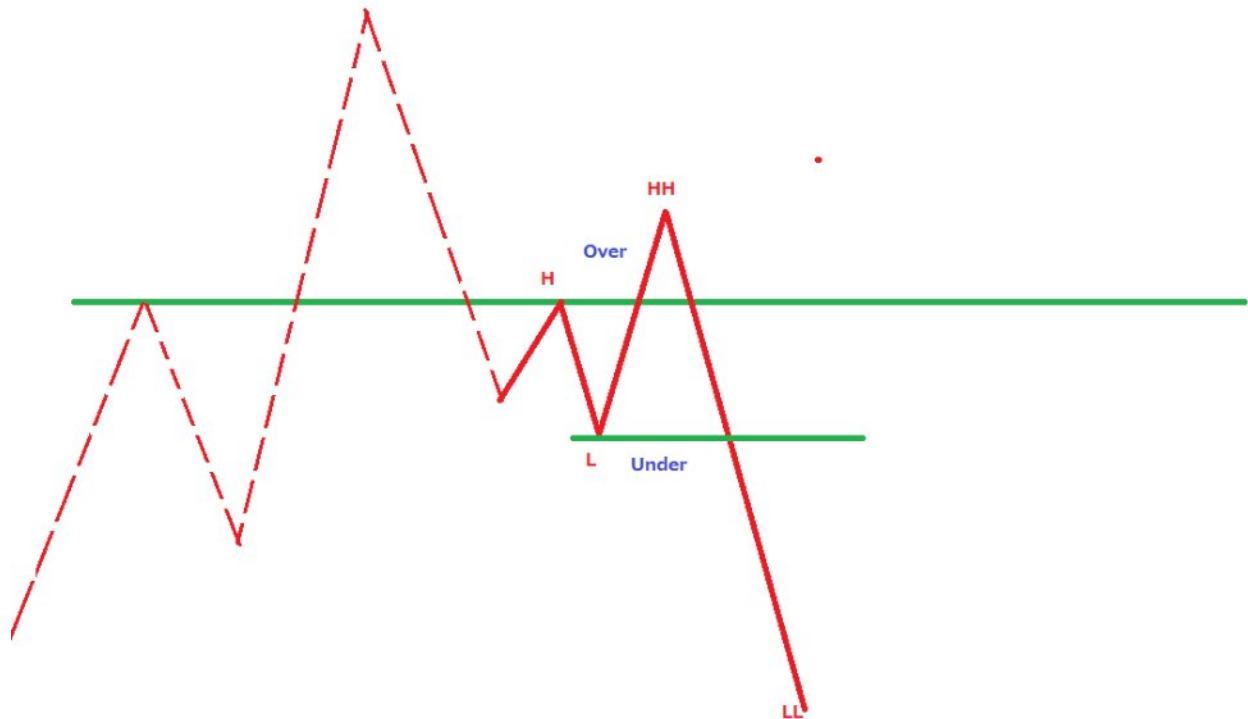

Chart Pattern for Intermediate Quasimodo we still use the same chart pattern There is enhancement in the middle of the trip price created Movement Under

Look at the diagram above ... The difference between QM Basic and Intermediate QM is padakotak BLUE

There is another chart Pattern Blue Quasimodo in the box.

If we ZOOM out blue box we will be able to diagram below:

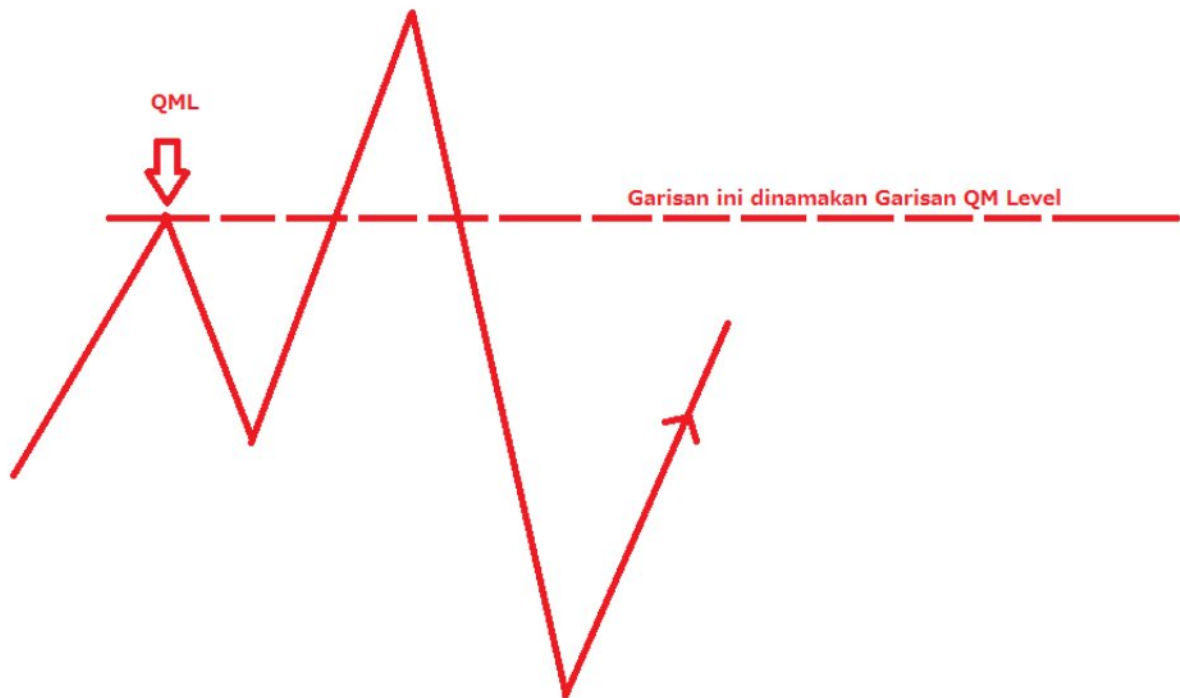

Where the same Chart Pattern Quasimodo there in the blue box.

This is called the QM QM

There is a small QM QM in large ... and the most important thing is the same QML QML or row between 2 QM is.

What is QML or QM Level

QML is a line made on bahuKiri LEVEL ... This line is called QM Level (QML)

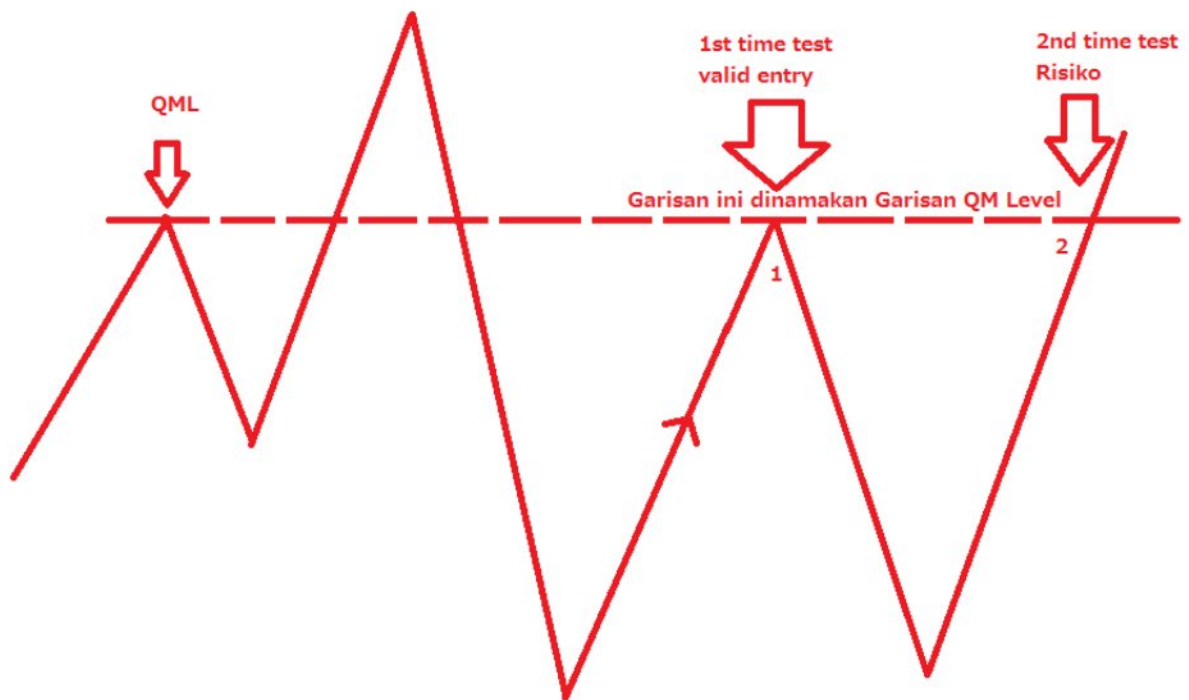

QM level Valid only during the left shoulder still do not have a pair (right shoulder has not happened)

As the diagram above QML is still not have a spouse (bahukanan) because the price has not been up to the line QM Level..maka this level still Fresh or Valid

QML Invalid

Valid is QML QML is not already have a partner. That's left shoulder existing right shoulder (pair)

Contohsepertidibawah

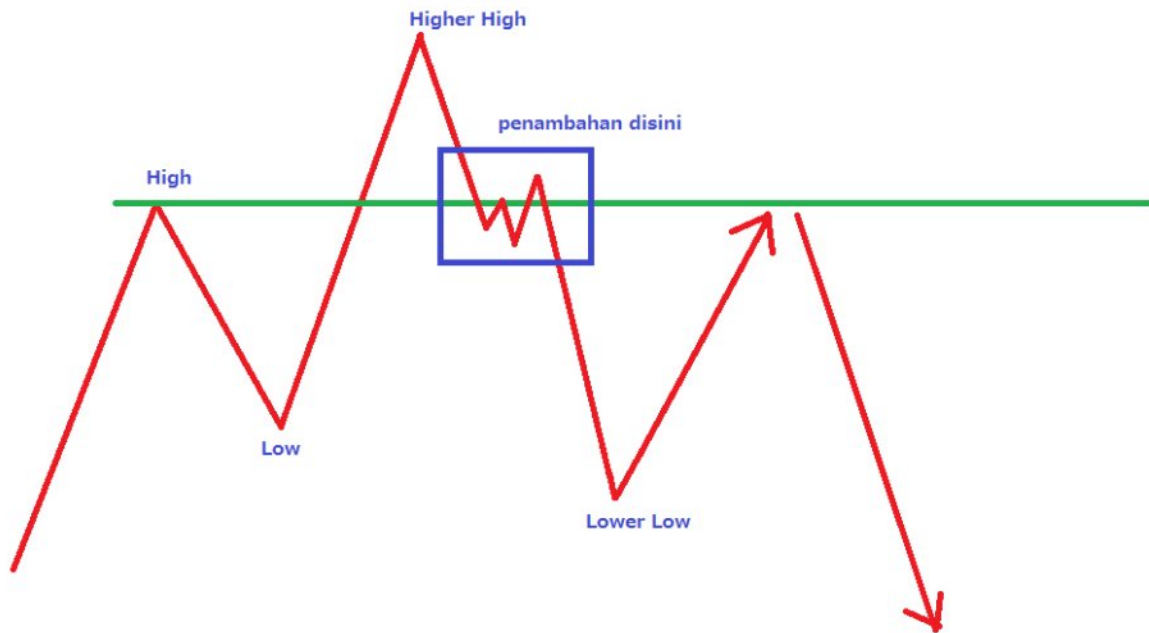

When price is at No1 ... we saw the price fall in fresh QML (untouched)

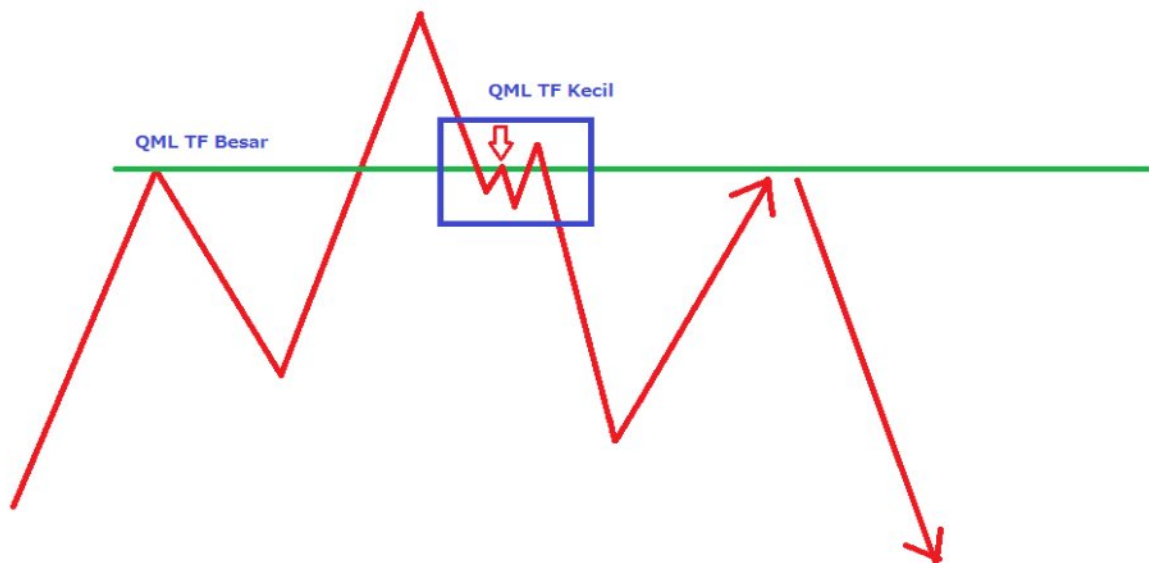

Then Valid to sell

When the price dating back at NO 2..kita see left shoulder level or QM is not fresh anymore because it was touched by No 1..maka QML is not fresh and is berisikountuk we sell again at No. 2.

We return QM Intermediate chart pattern.

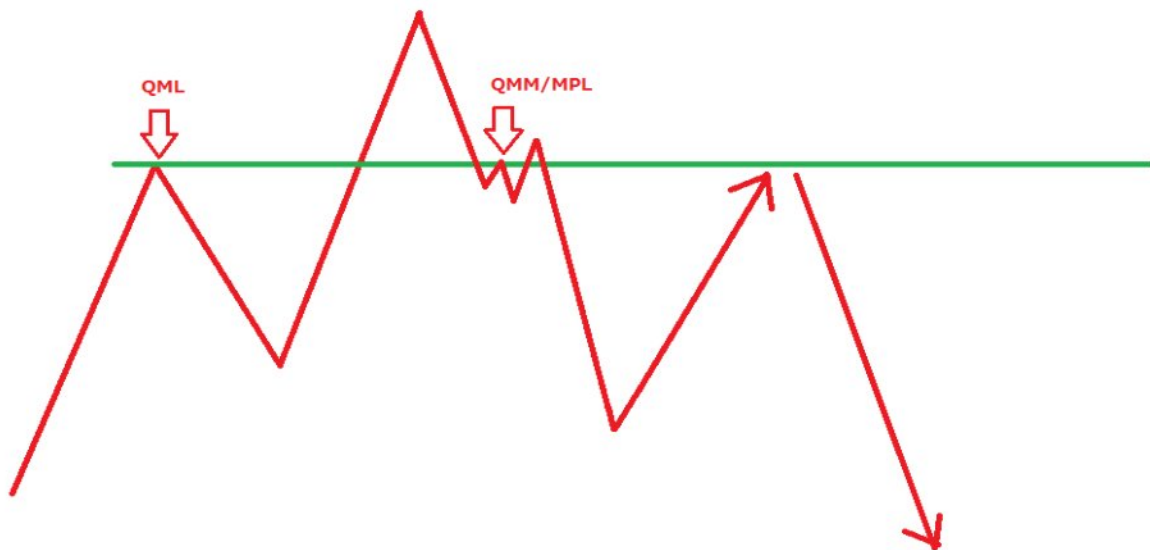

If we mark the QM level on the chart above we can QM Level 2 of the same line as in the diagram below:

Note QM Level TF Big same line with QM Level TF small ... It is very important to get a sharp entry. (TF = Time Frame)

Macau o avoid confusion, we changed the name QML small tf to the QM QMM Medium Level TF) or Maximum Pain Level (MPL)

Then it will be as below:

MOST IMPORTANT Pay attention to what we find here is QML DANMPL the same line to get a Sharp entry.

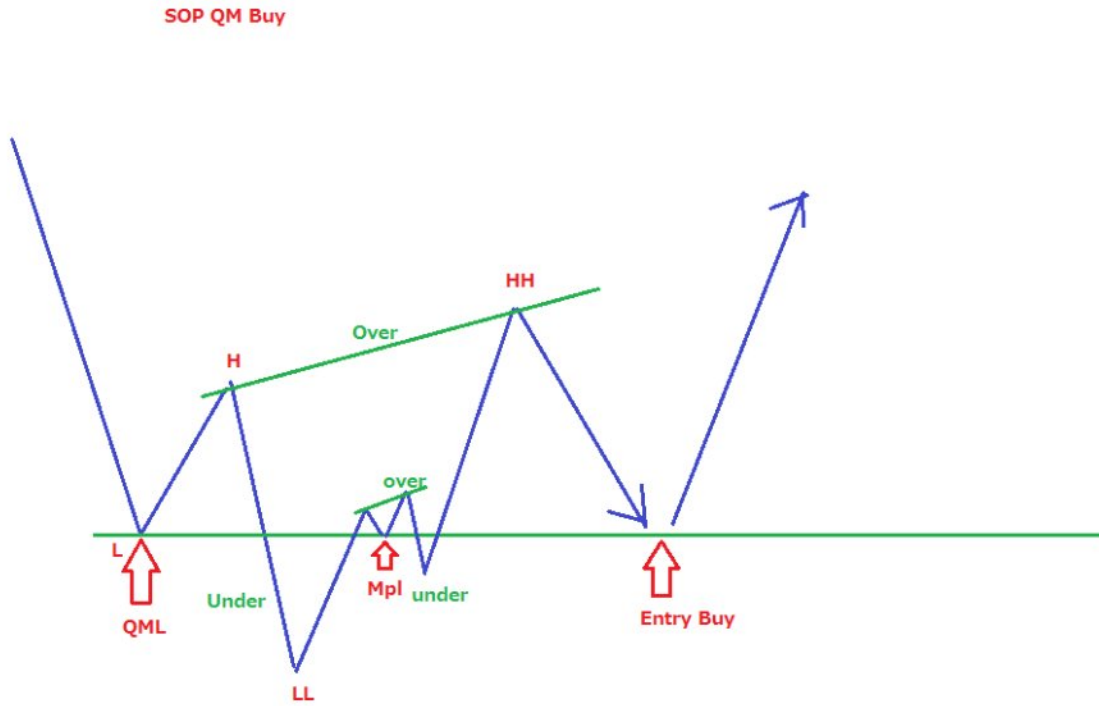

Example below:

ininn Purpose only - ShadowunFX

NOTE: To Buy the same setup ... Just flip chart

It will be like this:

And the example below:

Ok so far we've tgk example QM beautiful setup where QML same level with MPL

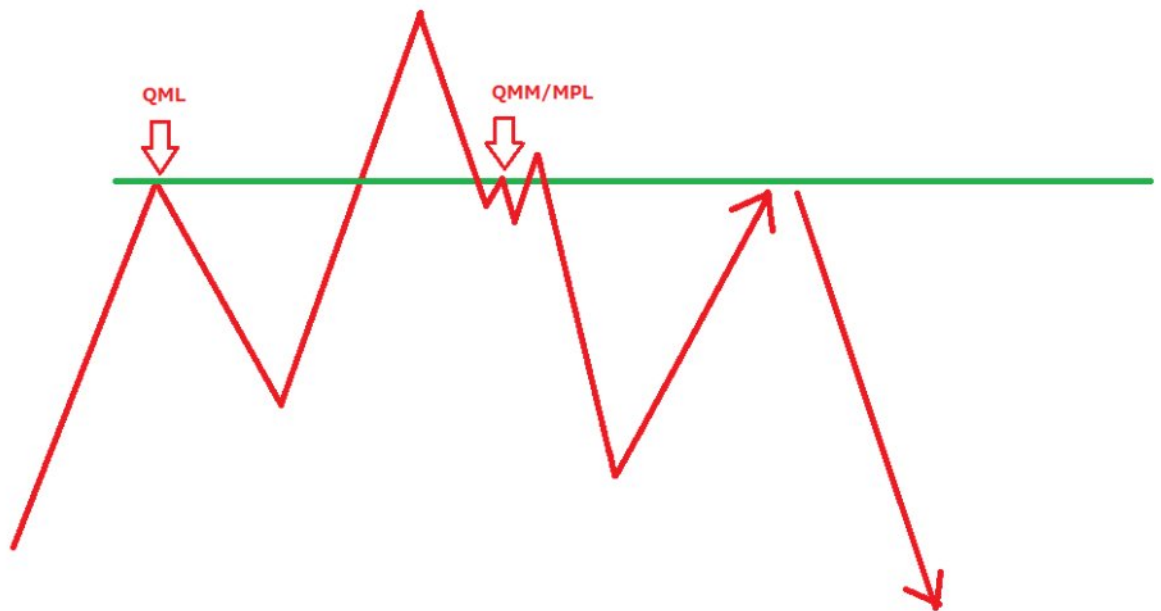

And we will also learn about the ADVANCE QM where Price Action Chart Pattern others like fakeout, SR Flip, Diamond, CP and CPLQ will play a more important role in ensuring our entry Sharp and has a probability of WIN higher with MINIMIZE Risk and MAXIMIZE THE REWARD

4. QM Shadow

CS shadow QM is simplified pattern of Chart Pattern QM.

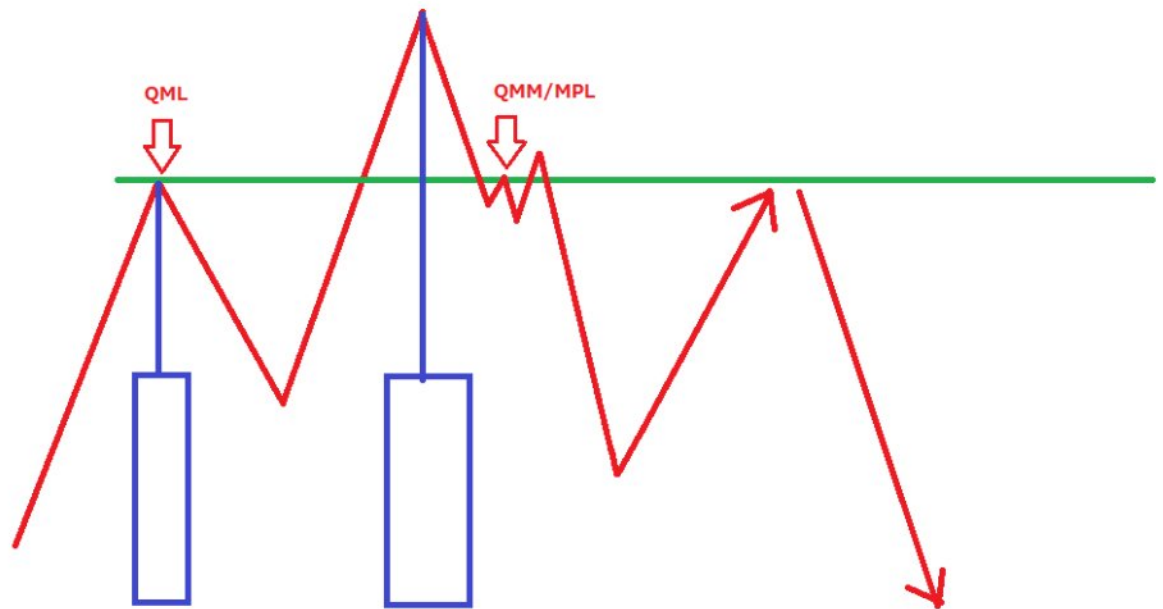

Take note here the difference CS Chart Pattern and Pattern

If we take out the chart pattern QM then recover so as follows:

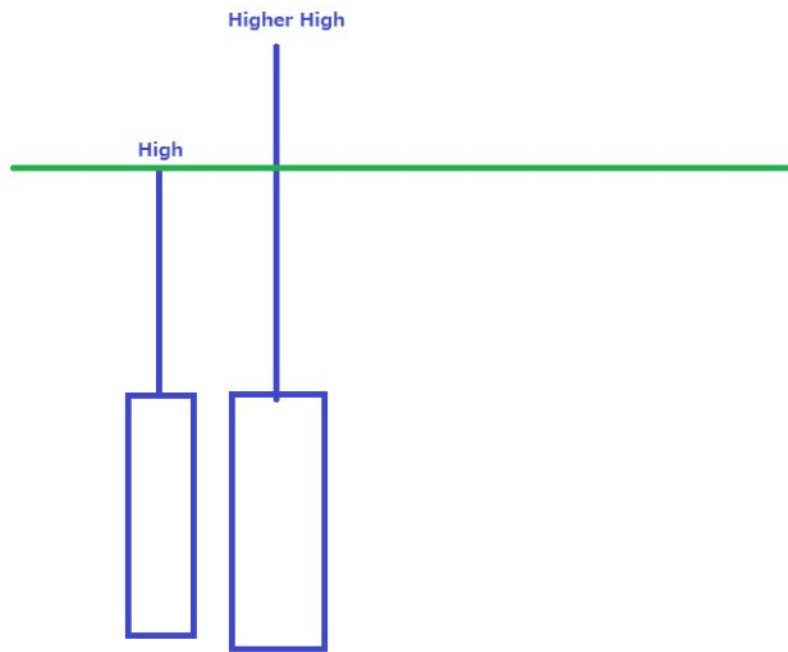

This is a chart Pattern ..

And if we simplified the chart pattern to Time Frame larger as Daily and H4 then we will be able to CS Pattern as below

Note : Merah adalah Chart Pattern
Biru adalah CS Pattern

And if we throw Chart Pattern and leave only the CS pattern it will be like the diagram below:

And still remember the QML or QM LevelHigh above are as Bahu Kiri Level QM is still Single or Fresh and still no partner.

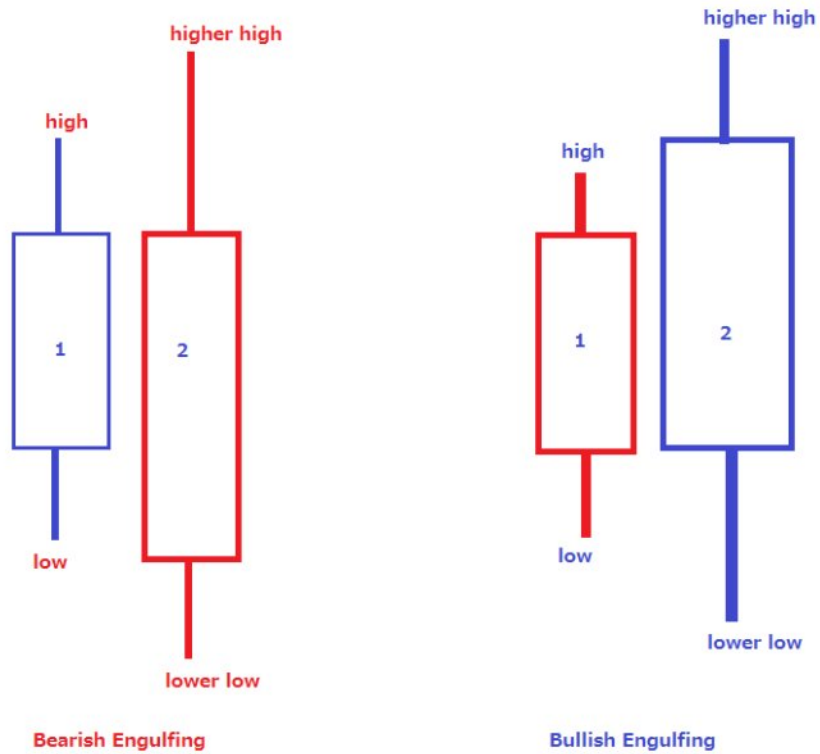

QML then we will be as below:

Help Understand The Shadow QML because we will use this place as our Entry when mixed with the setup of Price Action Advance as fakeout, SR Flip, Diamond and CPLQ ... QML very important to understand this ...

Another example is CS Engulfing Pattern. You know cs Engulfing pattern?

Below is cs and Bearish Engulfing pattern Bullish Engulfing

Note CS Second Higher create high quality compared to the first CS. Remember the word

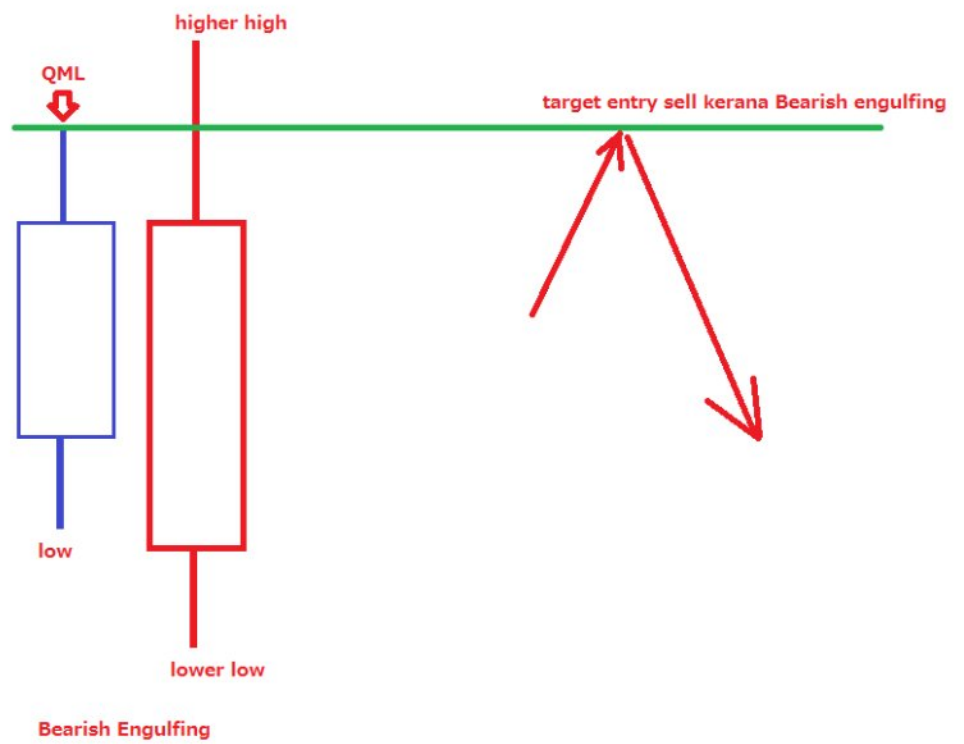

OVER ??

Note CS Second Low Lower than Low creating CS First ... remember the words

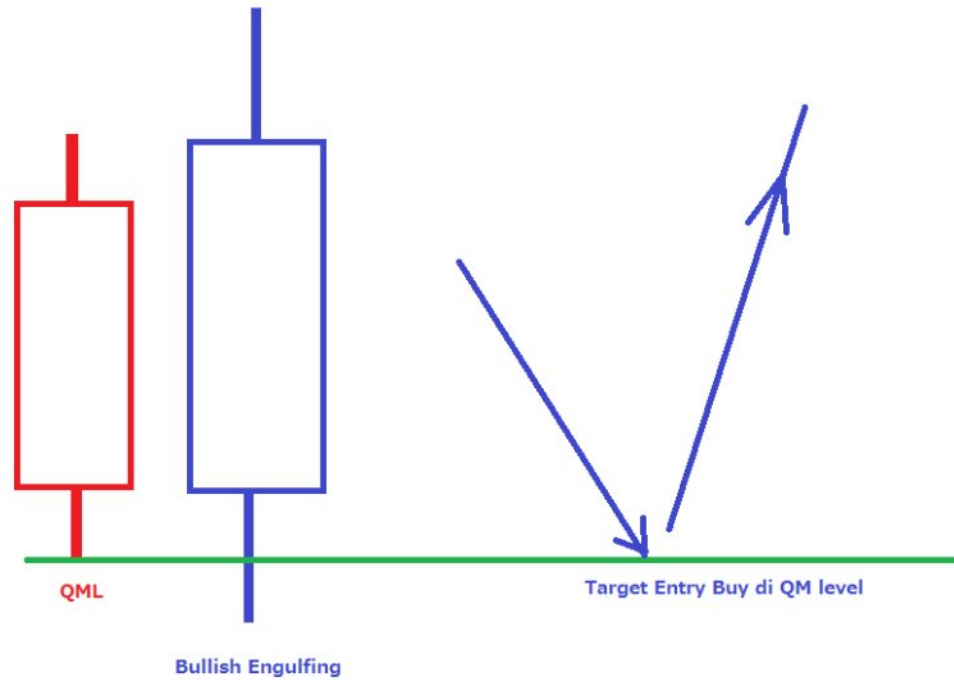

UNDER ??

Remember what it was OVER and UNDER ??? .. yes Quasimodo ... so where is QML cs ??? ...

We draw together QML CS Bearish Engulfing below ...

Ok ... the Bullish Engulfing also drawing below

Note: Please remember this ...

We always target QML / MPL / QMM sebagai tempat Entry us ... either buy or sell

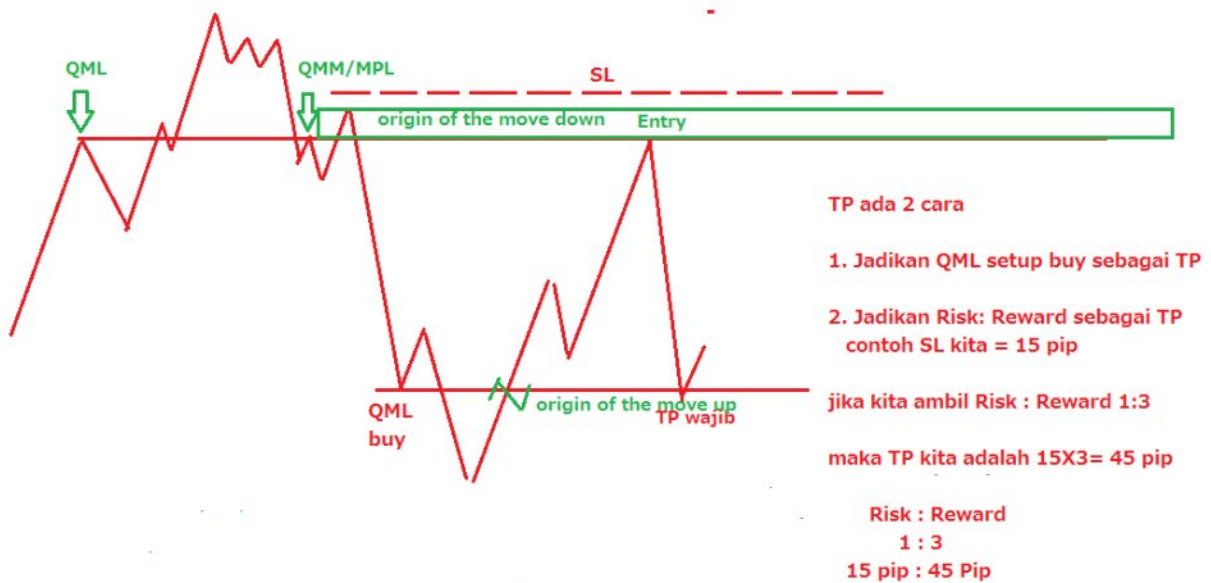

I hope you all faham QML or QMM or MPL

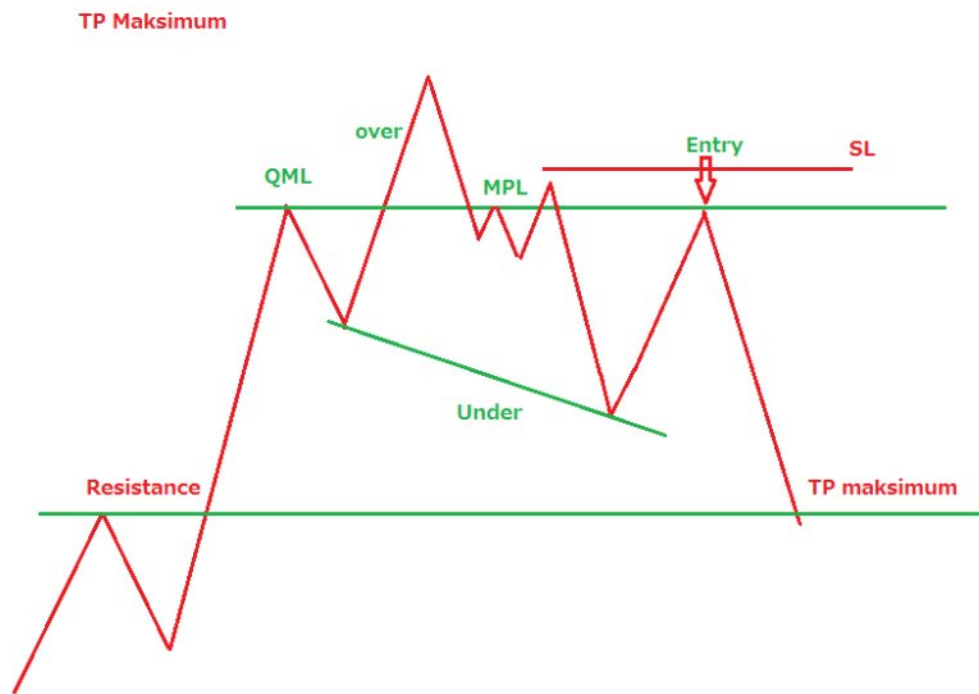

5. Target and Stop Loss TP SL

We have 3 ways to determine our TP

1. Tp is obliged to buy at the current price datangsemulakekawasan QML QML buy
2. Risk: Reward ratio ... you bolehgunakan 1: 2 or 1: 3 or 1: 5 up
3. Maximum TP is in the Resistance before the price makes pattern QM

Example setup sell

I hope that TP is not a problem with rkerana in forex is no guarantee that each setup will be important ... that we have a Stop Loss and TP ... This gives us a trading **system** that can be adopted

But we must remember that we cover the BASIC and INTERMEDIATE QM

Later I will show how ADVANCE QM is formed by a combination of price action fakeout Diamond and CPLQ

Examples of entry using QML QMM and MPL

I want you to focus first on areas QML / QMM or MPL ago Ignore setup advance as fakeout and so on because the ADVANCE QM will explore more about the ebook setup ADVANCE others.

Remember higher high and lower low UNDER OVERNote betul2 How did the idea for getting entry using QML

That's all QM Master.lanya ebook include basic setup and Intermediate QM

For more Details Setup of QM Advance you can get in the next Ebook

"Fakeout Master"

Here the ebook will explain more details how to setup one by one fakeout jikadigabungkan with QM will be a very beautiful Entry ..

And bagaimanaZikir QM Master menjadiamalansebelumkitamelakukan Entry

It is the remembrance of QM Master to get a beautiful entry

"Wait for fakeout Wait
for Diamond Wait for
CPLQ Look to the Left

Look for MPL and you have an Entry "

Utkpeneranganseterusnyabolehpatkanebooklanjutanaiitu "QM Master Advance"

For a more detailed description is not sufficient for the 1 described did this eBook ...

Thanks hopefully useful

One last word from me ... "Draw draw draw and keep your practice to become proficient in the setup QM ... after you skilled then you will be

QM Master
