8 Steps as a Simple guide to use the "Cubei Method" Expert Advisor

1 ✏️Install the MetaTrader
For Example, you installed the MT on the following directory: *"c:\program files\meta trader\"*

2 ✏️Extract **TotalEACompound.rar**, and get the **TotalEACompound.ex4** file, and put the file on : **"c:\program files\meta trader\config"**

3 ✏️Run MetaTrader
Create a demo account with a virtual money in it, say it would be $5,000.0

4 ✏️"Right Click" At the "*Rates Table/Market Watch*" and choose "*Symbols"*
Make sure **EURJPY, USDJPY, and GBPJPY** are selected, apply and close the dialog

5 ✏️"Right Click" At the rates table/market watch at each pair i mentioned above and click 'chart window'
Choose a **5 Minutes Time Frame(5M TF) for EURJPY and GBPJPY**, and choose a **15 Minutes Time Frame(15M TF) for the USDJPY**

6 ✏️Expand the Expert Advisor Tree, and drag the ExpertAdvisor (TotalEACompound)to each chart
Modify the Ea's properties for each currency pairs:
You need to enter the following setup **For every charts**

7 **For the the 'Common Tab' :**
'*check*' on **'Allow Live Trading'**
'*Un-check'* on **'Ask Manual Confirmations'**

8 **For the 'Input Tab'**
Please read the **Settings.txt** file

EA Stands for Expert Advisor, it's a plugin to do an automated trading, you use by this simple steps..assuming that you already have downloaded the MetaTrader, here is a quick step to set up the EA to work properly

Note : To protect the profit for pips, ex. 300pips or above set the 'ProtectProfit' variable on Expert's properties page on the most volatile pair, such as GBPJPY. Then if pips on the running trades has exceeds The **"ProtectProfit"**, the EA will **close all open trades**.

Hope this simple guidance would help if you ever stumble to more questions, please allow me to help.

✏️That's it, you are ready to trade the Forex market, from time to time, the EA will automatically choose the best opportunity, and trade it

The 'HELPER' Scripts

✏The scripts emebeded
When you extracted the TotalEACompound.rar it should consists 1 EA under the root directory, and 3 scripts under the **'scripts folder'**

✏Install those scripts
You need to install those scripts, just copy them to your ` **[instalation dir]\Experts\Scripts**' for example : **C:\program files\meta trader\experts\scripts**

✏Running scripts
If you have copy those scripts on the right folder, browse your 'Navigator' pane on MetaTrader, expand scripts, and you should see the scripts there. To Run it, just double click the script which you would like to execute

✏The "NoTrade" Script

1 If for some time you watches the markets, and then you realise that you have earned enough, then you should call this script, by double clicking them on the list

✏The "PleaseTrade" Script

2 When you use the "NoTrade" Script, then you'll definitely need this one, when you press the NoTrade script, then the MetaTrader should display "No Trade is Allowed, Closing All Trades", the EA won't open any positions again, to instruct the EA to 'work' again, execute this script.

✏The "Total Trade" Script

3 It will show your current statistics, how much did you trade, and how much pips did you profit/loss
