The contents of this material are for general information and educational purposes only [contents shall also mean the website <http://www.forexmasterlevels.com> or any website ("the sites") the content is hosted on, and any email correspondence or newsletters or postings related to such website]. Every effort has been made to accurately represent this product and its potential. There is no guarantee that you will earn any money using the techniques, ideas and software in these materials. Examples in these materials are not to be interpreted as a promise or guarantee of earnings. Earning potential is entirely dependent on the person using the product, ideas and techniques. We do not purport this to be a "get rich scheme."

Although every attempt has been made to assure accuracy, we do not give any express or implied warranty as to its accuracy. We do not accept any liability for error or omission. Examples are provided for illustrative purposes only and should not be construed as investment advice or strategy. All materials are an educational aid only.

No representation is being made that any account or trader will or is likely to achieve profits or losses similar to those discussed in this report or on the sites. Past performance is not indicative of future results.

By purchasing any content, subscribing to our mailing list or using the website or contents of the website or materials provided herewith, you will be deemed to have accepted these terms and conditions in full as appear also on our site, as do our full earnings disclaimer and privacy policy and CFTC disclaimer and rule 4.41 to be read here with. So too, all the materials contained within this course, including this manual, whether they appear on our domain(s) or are in physical form, are protected by copyright. "Warning: The unauthorized reproduction or distribution of this copyrighted work is illegal. Criminal copyright infringement, including infringement without monetary gain, is investigated by the authorities and is punishable with imprisonment and a fine." We reserve all our rights in this regard.

Alaziac Trading CC in association with <http://www.forexmasterlevels.com>, the sites, content, and its representatives, including Nicola Delic, do not and cannot give investment advice or invite customers or readers to engage in investments through this course or any part of it.

The information provided in this content is not intended for distribution to, or use by any person or entity in any jurisdiction or country where such distribution or use would be contrary to law or regulation or which would subject us to any registration requirement within such jurisdiction or country.

Hypothetical performance results have many inherent limitations, some of which are mentioned below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and actual results subsequently achieved by any particular trading program and method.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk and no hypothetical trading record can completely account for the impact of financial risk in actual trading.

For example, the ability to withstand losses or to adhere to a particular trading program or system in spite of the trading losses are material points that can also adversely affect trading results. There are numerous other factors related to the market in general or to the implementation of any specific trading program, which cannot be fully accounted for in the preparation of hypothetical performance results. All of which can adversely affect actual trading results.

We reserve the right to change the set terms and conditions without notice. You can check for updates to this disclaimer at any time by visiting <http://www.forexmasterlevels.com>

Your use and reliance on the materials is based on your acceptance of such Terms and Conditions and policies as appear on the site.

Welcome to the Rapid Cash Accumulator

In this special report you will learn how to trade another one of my most powerful trading systems. This is a system that I developed and traded on a wide variety of accounts, and it has proven to be a genuinely profitable method capable of delivering spectacular returns.

I've been trading this system for a while now, and it has worked very well for me. I have spent a lot of time fine tuning and tweaking the custom indicators to provide the most accurate trading signals.

As you may already know, I love programming my own custom indicators and trading tools. So, I spent countless hours working on the indicators to ensure that everything works as expected.

The system itself can be traded on all currency pairs. I personally monitor and trade a wide variety of currency pairs, so you can be sure that this system will provide you with many tradeable signals.

The system can be traded on all time frames, but I would suggest that you start trading it on the M15 or the M5 timeframes for the best results.

The system can be traded at any given time, but I would suggest that while you are still learning the system that you stick to the most active trading sessions.

Over the course of this report, I will walk you through the different components of the system. We'll start by looking at the different indicators you will use. It's important that you understand what they do and how to read them, so you can spot Buy and Sell trades when they appear on your charts.

I'll then walk you through the rules for identifying both Buy and Sell trade signals and show you a few examples so that you can get up and running with the system as quickly as possible.

So, let's get started...

System Components

The Rapid Cash Accumulator system uses six indicators that were custom built for the Metatrader 4 trading platform. Let's go over all indicators we use in this system.

What are Colored Candles?

Colored Candles is what I call this simple custom indicator that will give you an idea about the current trend. We are basing the current trend on the 50 EMA and the current price. While price is above the 50 EMA, the candles appear **green** in color. If price is below the 50 EMA the candles are **red** in color.

The Colored Candles indicator is useful for traders looking to trade in the direction of the trend, or to better identify trending moves or pullbacks.

What is SupRes?

The SupRes indicator is our support and resistance finder. After every few candles, the indicator will search for potential support and resistance zones based on the previous market movements. Support zones are identified by "Pink Dots" and resistance zones with "Green Dots."

Using the SupRes

The SupRes indicator is useful to spot potential plays. The goal of this strategy is to look for breakouts, and that's why we are going to look for areas where price pushes above the green resistance zones or below the red support zones.

What are Pivots?

The Pivot Points indicator is a simple pivot indicator that will give you basic information such as the Daily Pivot Points, Support 1, Support 2, Support 3, and Resistance 1, Resistance 2, and Resistance 3.

The indicator is designed to only show you Daily values and you are going to get the latest data updated at the end of the New York session. Have a look at the image on the following page:

Using the Pivots

The Pivots are useful for traders to get a quick idea of how much room they have for a trade in the market at any given time. Every time you want to enter a trade, consider what Pivot level you are currently testing. If you are around Resistance 3 or Support 3, you should probably skip the trade altogether or enter the trade with lower risk.

What is Direction?

The Direction indicator is like the Colored Candles indicator, but this indicator is designed to give you a quick view of the trend based on the higher time frames.

We are picking up the trend data from the 4-hour time frame, and if there is a Bullish trend you will see a **Green** "Trade Bullish Setups" button as shown below. On the other hand, if there is a Bearish trend you will see a **Red** "Trade Bearish Setups" button on the upper left corner of the chart.

Using the Direction Indicator

The Direction indicator will give you a quick view of which side of the market you should be trading right now. After the "Bullish" or "Bearish" button appears on your chart you just need to wait for next system rule to be met before you proceed. Additionally, you can use this indicator with any trend-following system you might be trading.

What are StoRSI and Histogram?

These two indicators are our confirmation indicators. StoRSI is a slightly modified version of the Stochastic and RSI formulas. The Histogram is based on the Momentum formula. On the image below StoRSI is at the top and the and Histogram is at the bottom.

Using the StoRSI and Histogram Indicators

Both indicators are designed primarily for confirming the trade signals we receive when trading this system.

So, we are going to look for the StoRSI to move above the 65 level when we want to Buy and move below the 35 level when we want to Sell.

For the Histogram we are going to look for **Green** bars when we want to enter Buy trades and **Red** bars when we want to enter Sell trades.

Now that you are familiar with the different components that make up the system, it is time to take a closer look at the rules for identifying Buy and Sell trades on your charts.

Let's continue...

Buy and Sell Trade Rules

Here are the rules for identifying and entering Buy and Sell trades using the Rapid Cash Accumulator system. The rules are followed by a few examples to help you grasp the rules.

REMEMBER! All conditions must be met before any trades may be considered.

Buy Trade Rules

1. The Direction indicator must show "Trade Bullish Setups".
2. Wait to spot a breakout of Green Resistance on the SupRes indicator.
3. Confirm the move – the Histogram indicator must be **Green** and StoRSI must be above 65.
4. If all the above conditions have been met, proceed to enter the market with a Buy trade immediately. You do not need to wait for the candle to close.
5. Place your Stop Loss at the most recent Support line.
6. Place your Take Profit at double the number of pips away from your entry as your Stop Loss (1:2 Risk/Reward Ratio).

The rules for identifying and entering Sell trades using the Rapid Cash Accumulator is simply the reverse of the Buy trades.

Sell Trade Rules

1. The Direction indicator must show "Trade Bearish Setups".
2. Wait to spot a breakout of Red Support on the SupRes indicator.
3. Confirm the move – the Histogram indicator must be **Red** and StoRSI must be below 35.
4. If all the above conditions have been met, proceed to enter the market with a Sell trade immediately. You do not need to wait for the candle to close.
5. Place your Stop Loss at the most recent Resistance line.
6. Place your Take Profit at double the number of pips away from your entry as your Stop Loss (1:2 Risk/Reward Ratio).

As you can see the rules are very precise. If at any stage you find a scenario where the rules are not entirely met, do not enter a trade. Just wait for the next setup and ensure that all the conditions have been met.

Now let's look at a few examples.

Buy Trade Example

On the image below on the left, you can see that I've marked a point where we have the Direction indicator showing "Trade Bullish Setups" and we have marked a place where price has broken above the Green Resistance zone.

At this point we should look for confirmation from the StoRSI and Histogram indicators. As you can see, the Histogram indicator is showing a Green bar and the StoRSI is above 65 so we can consider this a confirmed setup and look to enter a trade right away.

We are going to enter the market as soon as we have confirmed the setup. As soon as we have entered the trade we need to set our Stop Loss and Take Profit levels.

For the Stop Loss we are using the most recent Support level, and we are using double the amount of pips for our Take Profit level.

As you can see from the image above on the right-hand side, we managed to get a nice profit before the end of the week.

Sell Trade Example

On the first image below, you can see that the Direction indicator shows a "Trade Bearish Setups" button and I have marked the area where price broke below the red Support level.

At this point we are looking for confirmation from the StoRSI and Histogram indicators. The Histogram indicator is showing a Red bar and the StoRSI is below 35. We can call this setup confirmed and we can look to enter the market with a Sell trade. We do not need to wait for the candle to close.

As soon as we have entered the trade we need to set our Stop Loss and Take Profit levels.

When setting the Stop Loss, we are using the most recent Resistance zone, and we are using double the amount of pips for our Take Profit. This ensures that we always earn twice as much from a winning trade.

As you can see from the image above, we managed to get a nice profit from this setup.

Conclusion

In conclusion, I would like to share a few powerful tips that will help you get the most out of trading the Rapid Cash Accumulator system and give you the very best results.

Like I mentioned earlier, the system can be applied to all time frames and currency pairs with equal success, but I personally prefer to trade it on the following pairs as they tend to perform the best for me.

It might be different for you, and that's alright, but I'm sure you're curious to know the pairs that I trade so here they are: EURUSD, GBPUSD, USDCHF, USDJPY, AUDUSD, USDCAD, EURJPY and GBPJPY.

Remember to tighten your Stop Losses around High Impact News Releases or avoid trading at least 15 minutes before and after these events.

I have also found that the best results can be achieved on the 15 Min time frame and the 5 Min time frame.

This system has served me very well and I know that you will enjoy trading it too. If you can follow the rules and these simple guidelines you are well on your way to success as a trader.

I wish you the very best in all your trading endeavors.
