

Swing Trading with Heiken Ashi and Stochastics

By: Hugh Briss

Please note: The Bold emphasis are mine to help me understand better---eIPips

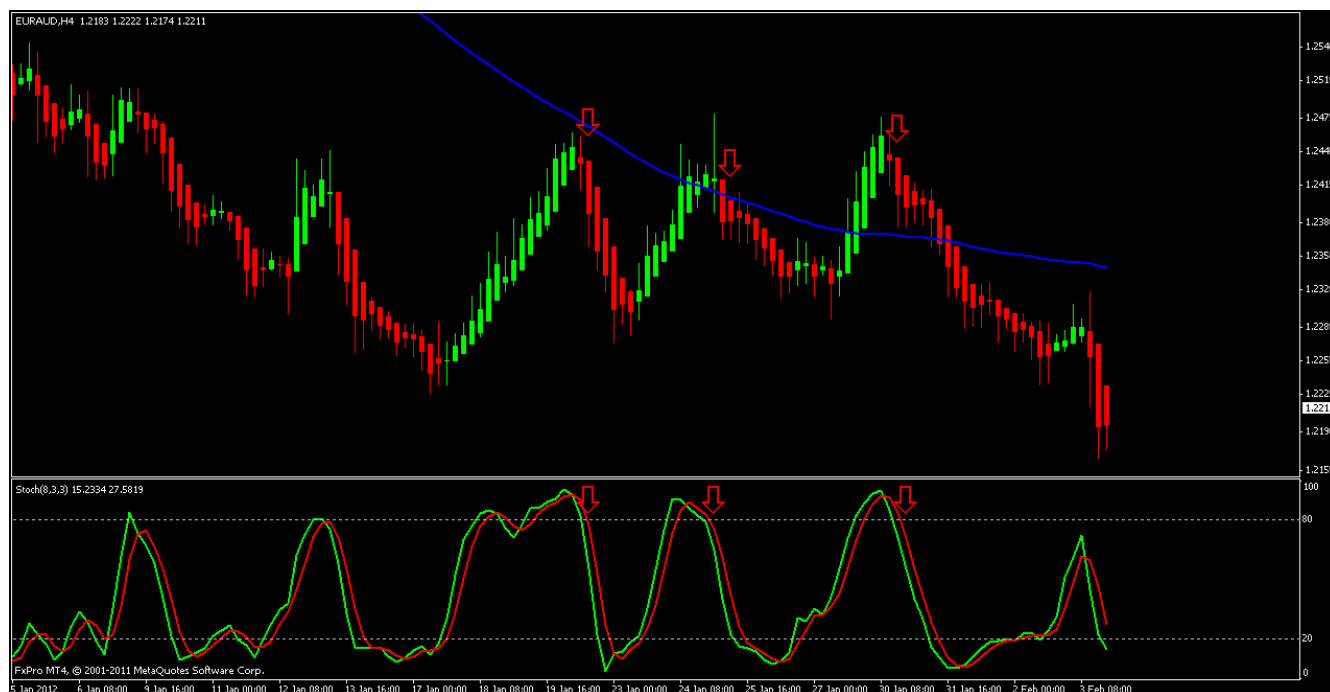

Trade Examples:

SELL (Short)

Here are 3 profitable trades in a row on **EURCAD, 4H (Post#2)**. Notice the moving average moving down smoothly. A fairly smooth pullback on each occasion followed by the heiken ashi candles changing colour and a nice smooth stoch cross in the direction of the trend. Read original entry@ <http://www.forexfactory.com/showthread.php?t=340556>

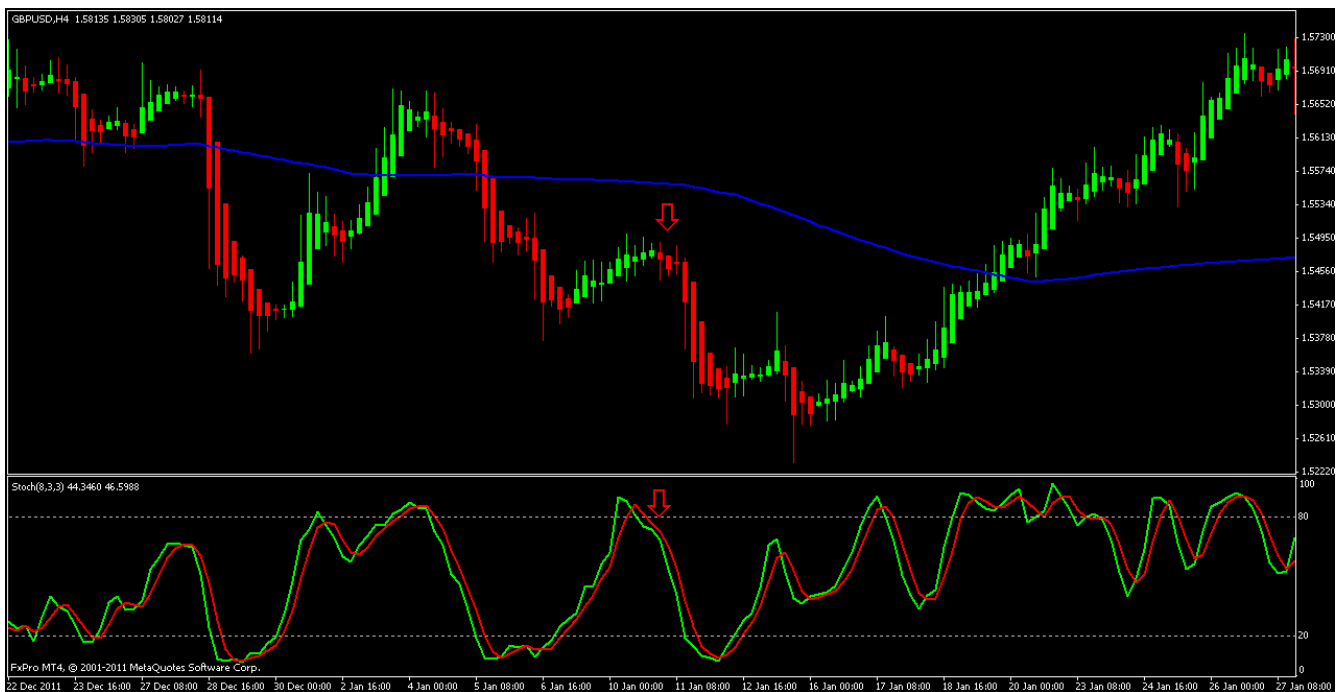

This is **EURAUD, 4H (Post#3)**. A similar story. Notice that even though the trend is slowing down these trades all occur at the same horizontal resistance.

USDCHF, 4H (Post#4)

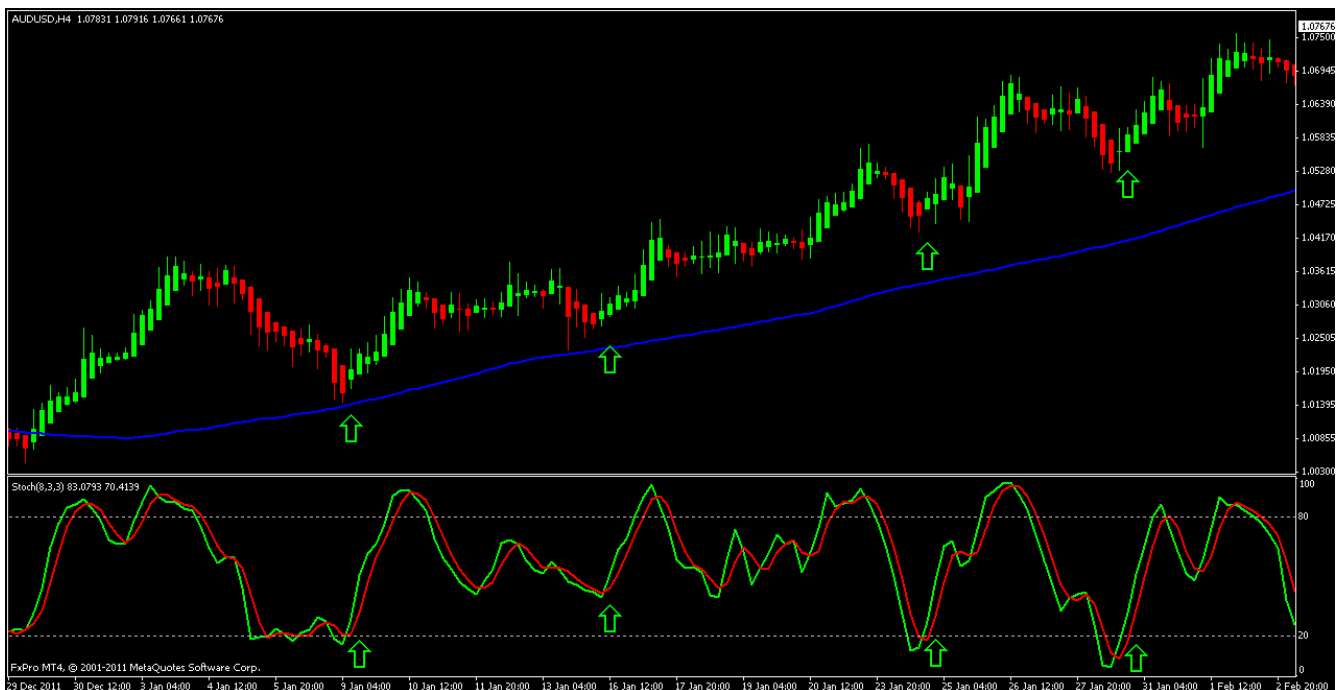

GBPUSD, H4 (Post#5)

BUY (Long)

Trends can last a long time in FX. It's not always easy to spot these trades as they occur and I'll make this the last chart for now as it's too easy to spot these in the past. Over the next few weeks I hope to show some good, profitable trades called well before they happen and you'll soon get the idea. **AUDUSD, 4H (Post#6)**

How to change Colour Bars on HA candles by Hugh Briss (Post#13)

If you are using metatrader go to Tools and open the metaquotes language editor. On the right hand side you have the navigator. Open the indicators folder and find the heiken ashi.mq4 file. Double click that and it will appear in the main window.

You need to **change the colours in 8 places** as you can see in the screen shot. You can use any colour that is recognised by metatrader in the normal drop down list.

Once finished click on "compile". Your colours will be as you want them every time you use the indicator.

I have traded this method or a method very similar to this on and off for a couple of years. The idea has evolved and got more complicated and now less complicated over time.

Hugh Briss' anatomy of EURJPY 15 min trade (Posts# 92, 95, 96, 97 and 105)

EURJPY anyone? 15 min chart here, trending up, just got to **wait for a clear turn**.

EURJPY, setting up now. Trendline gone but **stochs crossed and moving up** and **green HA forming**. I'm **buying** if this candle closes green.

In, 20 pip stop 50 pip take profit... (Post#97 no chart) 25 pips up so stop moved to +1

A nice 50 pip trade. On to the next one.

EURAUD, 4H Short (Post#127)

I've taken euraud short, almost a ha doji with stoch cross.
